I get what you're saying. I do. But using this story as an example: It seems more coincidental than definitive that cannabis contributed to this kid's death

The statement that "correlation doesn't mean causation" is true, but it doesn't mean that correlation is the OPPOSITE of causation, as some people seem to think. In general, correlation is evidence of a causal relationship, not proof but evidence.

1 1

**Alex Berenson**
@AlexBerenson

Replying to

In the absence of a randomized controlled trial (or, preferably, several trials), we depend on other factors to show causation; most and arguably all of those factors are met in the case of cannabis and psychosis.

9:24 AM - 31 Jul 2019

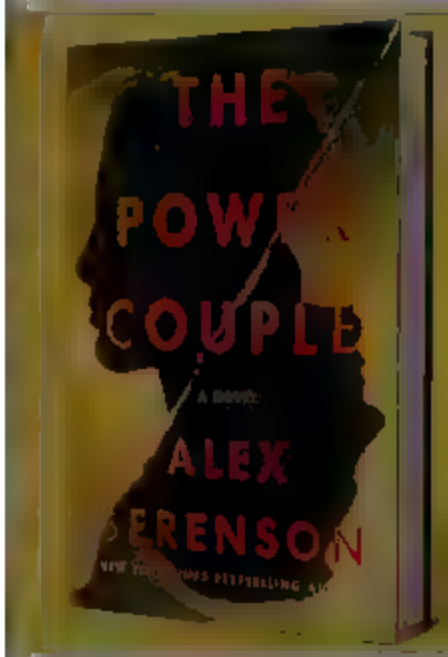
1 1

**Alex Berenson** @AlexBerenson · 31 Jul 2019

Replying to

As for cannabis and child abuse, we are at a greater disadvantage in making claims of causation because abuse is relatively rare, and cannabis intoxication is only sometimes the only obvious causative factor.



3

**Alex Berenson** @AlexBerenson · 31 Jul 2019

Further, these cases aren't being examined by neutral scientists - the evidence is usually being presented in trials where either side may have reason to emphasize or deemphasize cannabis use (or claim that the abuse did or did not really take place).

Dave - I fear you - like lots of folks - don't truly understand what "causation" means. Even randomized controlled trials cannot prove causation in any one case. They can only show that in two equally matched groups, adding a treatment leads to differential overall outcomes..

In non-cannabis related news: I have a question. What is happening to toilet paper rolls in this great land of ours? Double roll, fine, I get it. But these days the "mega roll" - 4x regular size - seems to be the new standard...

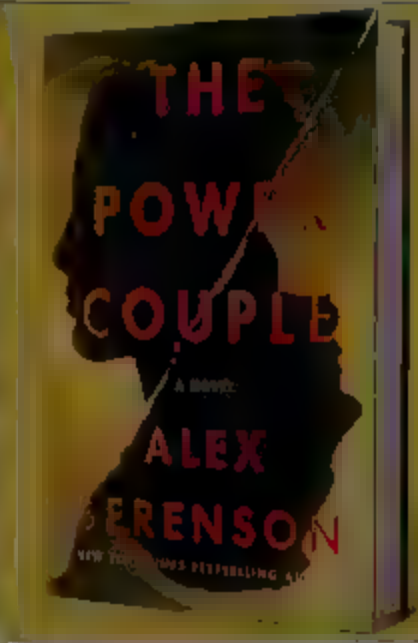
3 1

**Alex Berenson** @AlexBerenson · 31 Jul 2019

And lately I have even seen the "super mega" - at 6x! What fresh hell is this? These do nothing but choke the poor dispenser. And for those of us with kids and/or dogs, an "accident" with the roll is now catastrophic.

1 1

**Alex Berenson**



@AlexBerenson

Worst of all the humble "normal" roll has disappeared, and the double appears close to extinction. I beseech the lords of Charmin to reconsider this choice. For all of us.

Another happy case of cannabis-enhanced parenting in upstate NY. I won't tell @washingtonpost if you don't.

**reveals that couple charged in negligent homicide smoked marijuana**

SUPPRESSION HEARING — Derek S. Dyer, of Rome, appeared for a pre-trial hearing in County Court on Tuesday. He is charged with the negligent homicide of his 8-month-old daughter. A trial date has been set for Oct. 28.

Sean I. Nitis
Staff writer
email | twitter

The Rome couple charged in the negligent law enforcement following the death of his daughter. Claire, as well as a recorded interview with police. Rene is scheduled for her own hearing later this month. They are both charged with one count each of criminally negligent homicide, a class E felony.

Rome Police Det. Richard Gallupi was the only witness called to testify at the hearing. The hearing was to determine if the interview and the statements were conducted legally, and that Dyer's Constitutional rights were not violated. Judge Bauer said he will decide on the matter at a later date.

Gallupi told Judge Bauer that he was called to investigate the death of 8-month-old Claire Dyer on the morning of Aug. 28, after the child had been found unresponsive at home. Police

**Alex Berenson**
@AlexBerenson

Thanks @JasonSolowsk for putting in the time to understand the strength of the cannabis-psychosis link and not being afraid to report clearly on it! If only @cnn @npr etc would do the same.

First off, this stuff is junk science. It relies on an implied causality for which there's no evidence. Basically, it's a rebranding of the gateway drug crap which made broad assumptions about MJ leading to harder drugs when the evidence only showed cocaine users liked MJ too

**Alex Berenson**

@AlexBerenson

Replying to

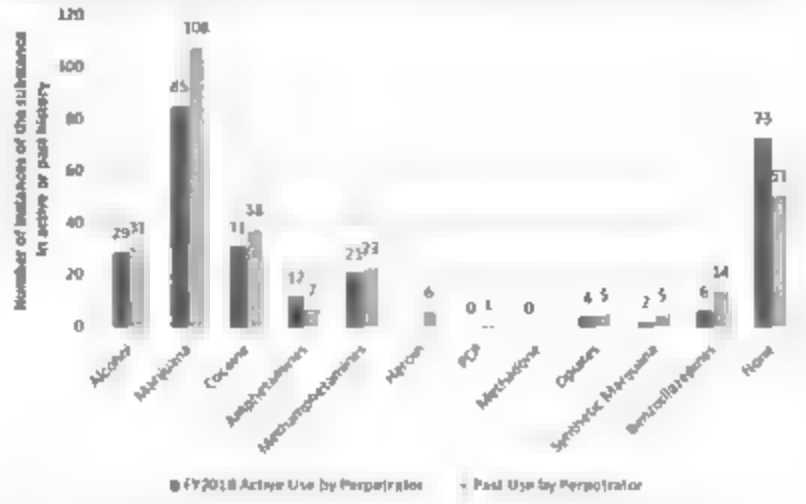
Sure - the best data comes from Texas, which does an admirably comprehensive job examining child fatalities (every state is supposed to, but many do very little). This chart is from their most recent annual report, released in March:

During the review of confirmed child fatalities, cases were reviewed for a documented history of substance abuse (including inappropriate use of prescribed medications) and for active concerns for substance abuse at the time of the child fatality.

For FY2018, 138 of the 211 child fatalities caused by abuse or neglect involved a parent or caregiver actively using a substance and/or under the influence of at least one substance that affected the ability to care for the child. In the tables and chart below, the substance abuse is described by type and if it was reported. Marijuana was the substance most identified as actively being used by the perpetrator (85 cases) in child abuse and neglect-related fatalities. In 21 child fatalities, methamphetamines and amphetamines were being actively used by the caregiver.

**Figure 11. Confirmed Child Abuse or Neglect Fatality by Substance Abuse by Perpetrator**



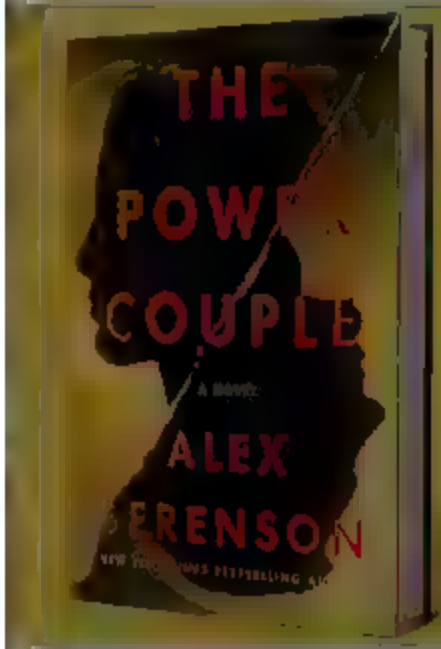


**Table 5. Confirmed Child Abuse or Neglect Fatality by Co-Occurring Substance Abuse by Perpetrator – FY2018**

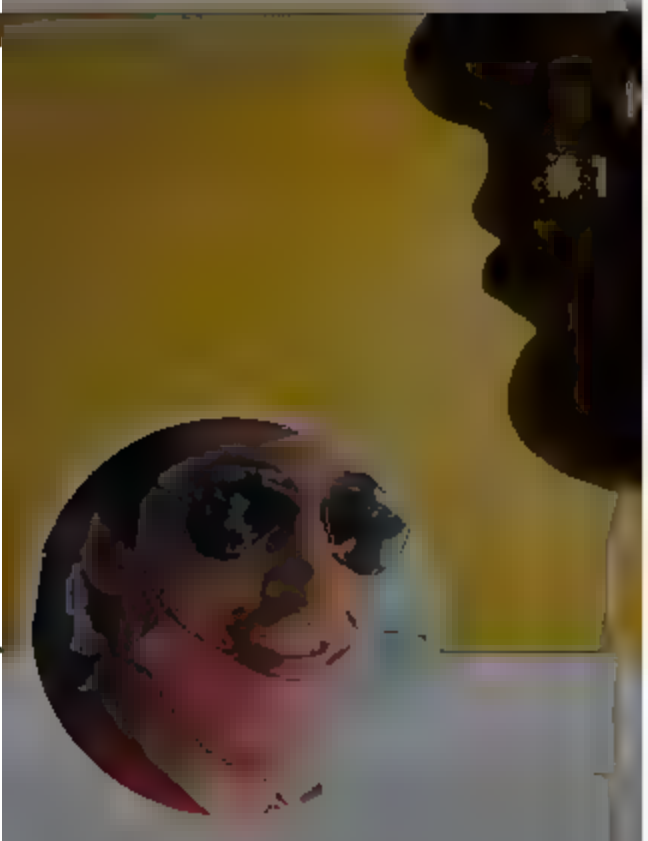

| Co-Occurring Substances | Active | Past History |
|---|---|---|
| Alcohol and Marijuana | 9 | 10 |
| Marijuana and Cocaine | 22 | 12 |
| Cocaine and Alcohol | 2 | 1 |

Not sure if you answered my question, so I will try asking again: are you saying you cannot respect people who take seriously the possibility of cannabis providing legitimate medical benefits for some people under some circumstances?

1

**Alex Berenson**
@AlexBerenson

Replying to

Which part of that answer was not clear? No, I don't respect anyone who pretends THC is medicine, and I believe that the way advocates have sold medical marijuana is profoundly dishonest.

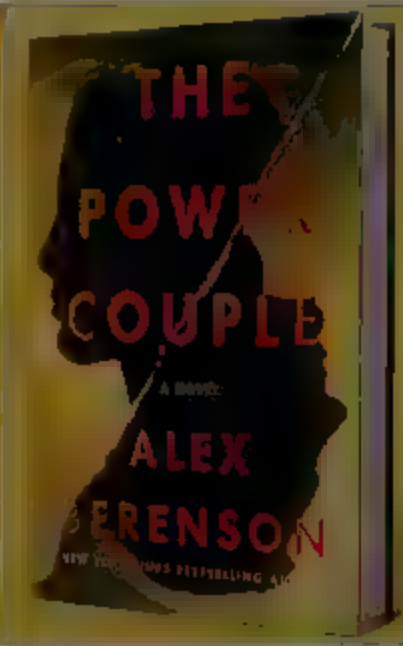
9:53 AM - 28 Jul 2019

1

**Douglas A. Berman** @SLandP · 28 Jul 2019

Replying to

I also do not respect anyone who "pretends" or is "dishonest" about medicine. But (1) your CBD answer suggests you recognize cannabis CAN BE something other than a rec drug, and (2) many (non-experts) also honestly believe (or want to believe) THC can have medicinal value...



1

**Douglas A. Berman** @SLandP · 28 Jul 2019

I share your interest in spotlighting/pushing out charlatans in cannabis space, especially those looking to make a quick buck selling snake oil. But that's not everyone in the industry or in advocacy (and I hope it's not most of them, though I suspect many fill your inbox)

Of course CBD can have medicinal value, as Epidolex shows. I am not dogmatic about this, nor moralistic, despite what folks who hate me and the book like to think. I don't like lie-based public policy, even if the people spreading those lie think they're doing so for good reason.

CBD and other cannabinoids, potentially, though the proven benefits fall way short of the marketing. THC extracts and high-THC flower cannabis? Absolutely not. Those are medicines like heroin's a medicine (only less so, heroin is actually an effective painkiller)...

And please don't start with "chemotherapy-associated nausea," if that's 1% of the medical authorizations I'd be shocked. And it's not even first line in that indication.

9:45 AM - 28 Jul 2019

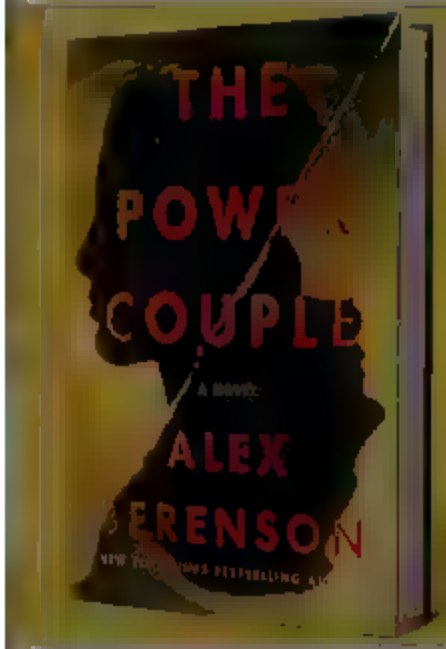
1

**Douglas A. Berman** @SLandP · 28 Jul 2019

Replying to

Not sure if you answered my question, so I will try asking again: are you saying you cannot respect people who take seriously the possibility of cannabis providing legitimate medical benefits for some people under some circumstances?

1



**Alex Berenson** @AlexBerenson · 28 Jul 2019

Which part of that answer was not clear? No, I don't respect anyone who pretends THC is medicine, and I believe that the way advocates have sold medical marijuana is profoundly dishonest.

and though I do not wish to defend MJ industry, your attack on media and academy continues your tendency to fail to engage the myriad harms of prohibition that media and academy are finally giving needed attention...

1

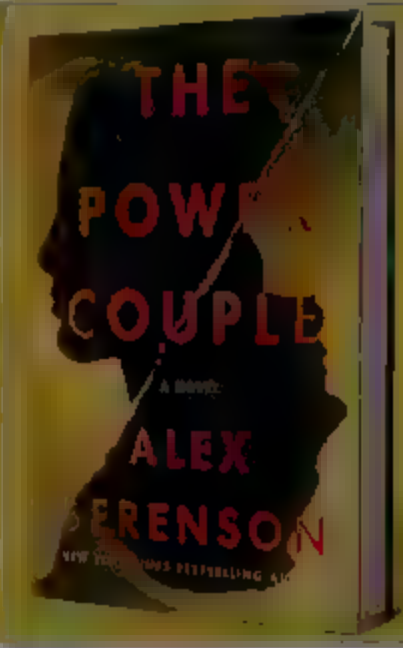
**Alex Berenson**
@AlexBerenson

Replying to

Look, the argument that marijuana is harmful but the current legal scheme (which is very far from prohibition) is more harmful is legitimate; I don't agree but I understand and respect it. What I don't respect - what has made me furious since TYC was published...

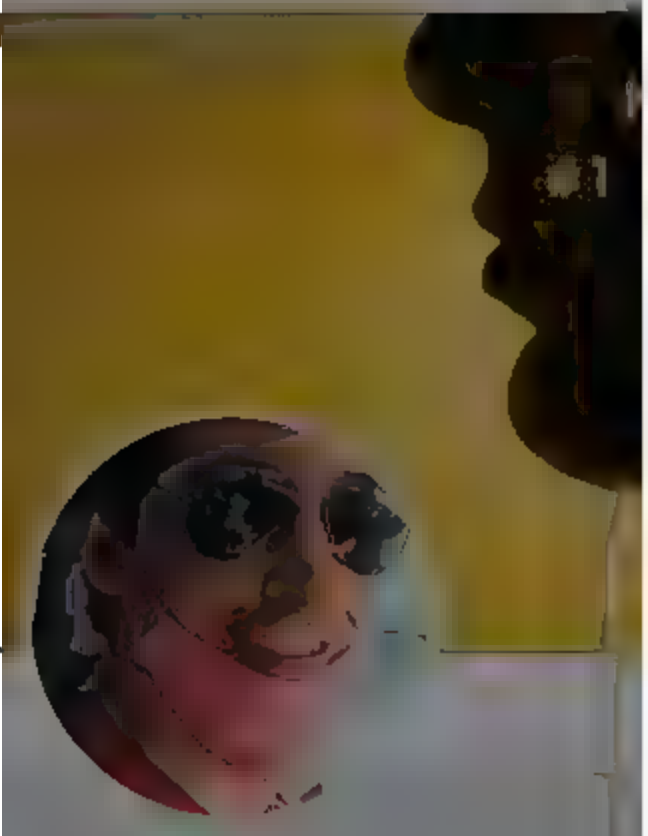
9:32 AM - 28 Jul 2019

1



**Alex Berenson** @AlexBerenson · 28 Jul 2019
Replying to
Is the effort to pretend that the science around mental illness isn't real, that the topline changes in driving deaths and violence aren't happening, that cannabis is anything other than a recreational drug, a problem to be managed. Start there. And then I'll respect you.

1



**Douglas A. Berman** @SLandP · 28 Jul 2019
To clarify, are you saying you cannot respect people who take seriously the possibility of cannabis providing legitimate medical benefits for some people under some circumstances?

plus alcohol already is an ingredient in various OTC medicines, whereas it seems it is still a crime to even put a little CBD in a cough drop. Alcohol so pervasive because industry so powerful even you discount the public harms they welcome for jobs and profits...

2

**Alex Berenson**
@AlexBerenson

Replying to

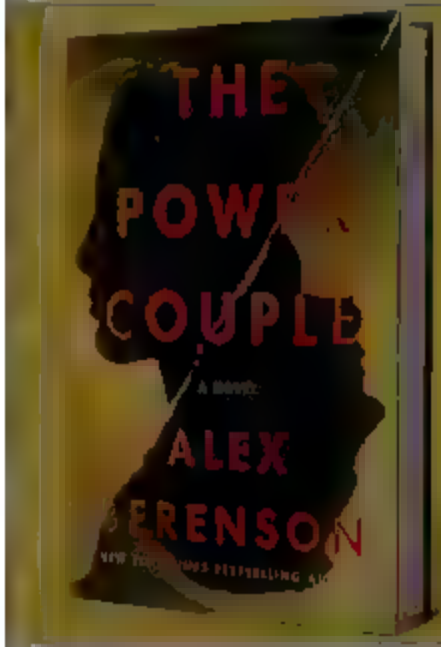
So I guess my question would be, why would any public health expert want to create ANOTHER industry like this, especially when the cannabis companies are already behaving terribly even before they get to full legalization?

9:24 AM - 28 Jul 2019

**1** Like

1 1

**Douglas A. Berman** @SLandP · 28 Jul 2019



Replying to

not a public health expert, but one answer (though really just a hope) is that legalization done right may help foster a more responsible industry. And, critically, legalization cuts the myriad harms of prohibition that disproportionately impact people of color and poor

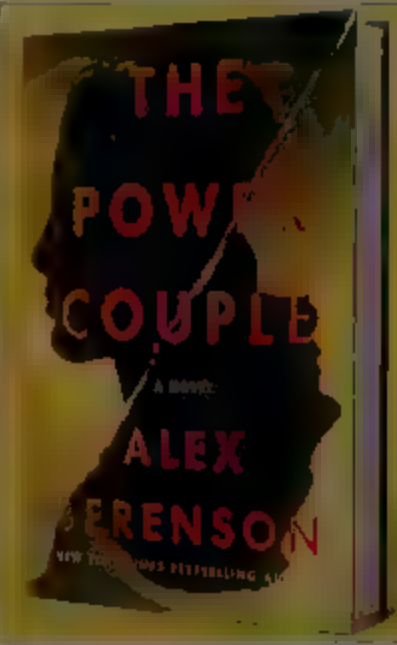
Is this the same research for medical marijuana? Cbd oil?

1

**Alex Berenson**
@AlexBerenson



Replying to [redacted]

No such thing as medical marijuana. Marijuana is an intoxicant, a THC delivery system. Thus many users these days prefer flower cannabis that are 20%+ THC and almost no CBD or semi-synthetic THC extracts. CBD may have some medicinal benefits, but it's not why most people smoke.

In all seriousness try to imagine this scenario with any other drug or alcohol: a mother doesn't just use an intoxicant during pregnancy but defends her use as good for the baby! And the cannabis lobby has spread its propaganda so effectively that we go along with this insanity.

> Another great case to retweet, @badlin. What makes it so funny is that the mother said during her pregnancy that using cannabis was good for the baby! And now she's charged with killing the same baby! Who died after ingesting THC! That kind of irony is hilarious, amirite?

Yeah, one in six adults used cannabis once last year. About one in 30 used it daily. Meanwhile I haven't recently counted all the killings of four or more people in the US in 2019 but there have been fewer than a dozen, I think. And cannabis has come up in almost every one.

In Virginia Beach and Tennessee and Louisiana and Aurora and suburban Portland. Now in LA. And probably in Louisiana again last month - Sean Barrette, the alleged spree killer, was reportedly hospitalized this year and I'd be shocked if drugs didn't play a role.

To me and @jberenson911. The families know the truth. The doctors know the truth. Soon enough we'll all know. All the propaganda in the world can't change reality.

> Illness and Violence". Our family has experienced firsthand the sad truths you shared in the article for more than a decade. One of the most devastating aspects of marijuana's horrific effect on individuals, their families and society is the absolute refusal of those with the ability to confront these issues to admit the damaging impact marijuana has made in so many elements of society. We have three young grandchildren who live in terrible circumstances due to their mother's ongoing addiction to marijuana and other substances, yet local law enforcement, mental health and child protective services turn a blind eye to the devastation marijuana has wrought in their family and in so many other families. Thankfully, your article has better enlightened our son, the children's father, to the truths you outline in the article. It is our fervent prayer that those facts will enable our son to better equip his children for the battles they encounter on a constant basis when they are in their mother's custody.

But better late than never, I suppose. My question is this: when the Post decides to look into the epidemic of psychosis and violence that cannabis has fueled, will it investigate how its own shoddy journalism fueled the crisis? Guess we'll find out in 2035 or so.

So @washingtonpost is busy patting itself on the back for explaining the decade- and two-decade-old machinations that fueled the opioid crisis. Necessary work, to be sure, though the Post is hardly breaking ground...

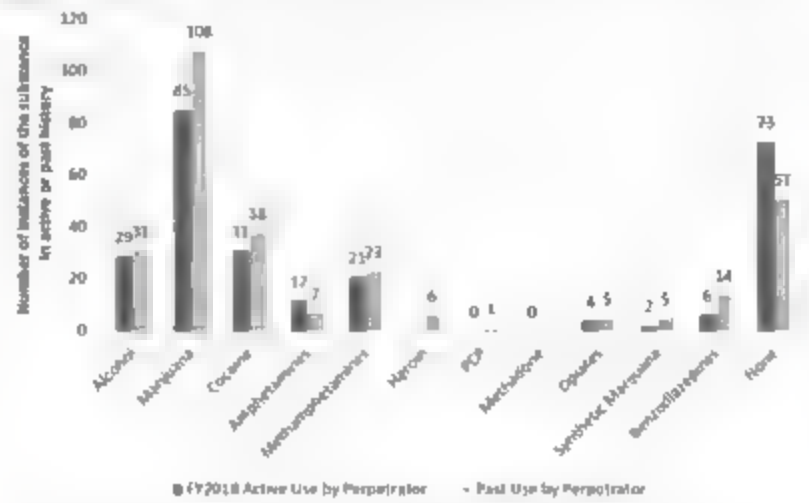
Here's the most recent data (2018) from Texas. Very few other states do as good a job breaking out the data. FL and AZ are two. They have similar trends.

During the review of confirmed child fatalities, cases were reviewed for a documented history of substance abuse (including inappropriate use of prescribed medications) and for active concerns for substance abuse at the time of the child fatality.

For FY2018, 138 of the 211 child fatalities caused by abuse or neglect involved a parent or caregiver actively using a substance and/or under the influence of at least one substance that affected the ability to care for the child. In the tables and chart below, the substance abuse is described by type and if it was reported. Marijuana was the substance most identified as actively being used by the perpetrator (85 cases) in child abuse and neglect-related fatalities. In 21 child fatalities, methamphetamines and amphetamines were being actively used by the caregiver.

**Figure 11. Confirmed Child Abuse or Neglect Fatality by Substance Abuse by Perpetrator**



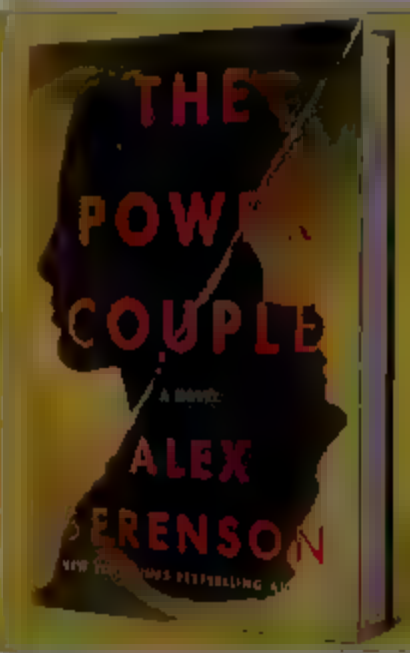


**Table 5. Confirmed Child Abuse or Neglect Fatality by Co-Occurring Substance Abuse by Perpetrator -- FY2018**

| Co-Occurring Substances | Active | Past History |
|---|---|---|
| Alcohol and Marijuana | 9 | 10 |
| Marijuana and Cocaine | 22 | 12 |
| Cocaine and Alcohol | 2 | 1 |
| Cocaine and Methamphetamines | 4 | 0 |
| Methamphetamines and Marijuana | 7 | 9 |

Add the Austin, TX police department to those publicly commenting on the link between cannabis and homicide: "Almost all drug-related murders involve marijuana... You'd think it would be for a high-dollar drug like meth or cocaine. Instead it's marijuana."

**especially marijuana sales**

Jacqulyn Powell 5 hours ago

AUSTIN (KXAN) — Austin homicide detectives say the majority of cases they work often involve drug deals.

Sergeant Eric De Los Santos says of the city's 35 murders in 2018, 20 of them happened while someone was selling drugs.

So far in 2019, he says seven of the city's 18 murders have involved drug deals. He says almost all drug-related murders involve marijuana.

"It is surprising to me, because if you're going to take

many people to carry a gun to marijuana deals.

"And unfortunately, in a lot of these cases that we're talking about, it's young guys," he said. "We need to invest more in our youth and give them alternatives to this and not glamorize this lifestyle."

Dalia Tirado, director of non-profit Youth Advocacy, says marijuana is involved in about 95 percent of the cases she sees when kids are in trouble. Youth Advocacy provides education and mentoring programs for youth throughout Travis County. The group's case workers also work with young people who have already landed in juvenile court.

"We've had kids shot and killed," Tirado said. "We've

"If you're not talking to them, someone else is. And so I think having these hard conversations early on is essential, and having those expectations set is essential," Tirado said.

She says some who come through the Youth Advocacy program began experimenting with marijuana as young as eight or nine years old. Usually she says, that's because of family circumstances, in which the child might feel neglected or neglected.

"I think being proactive as a parent is step one to change the family," Tirado said. "I think the youth is just a symptom of what's actually happening, and I think a lot of the youth we do get are self-medicating

THC saved your daughter's life? If that's true I'm glad to hear it. I know of many parents who have lost their children to THC. Medical and public health policy should be based on evidence, not anecdote. And there is no evidence THC is a safe or effective treatment for epilepsy.

You will never guess what non-violence inducing drug Brandon Andrew Clark smoked before he (allegedly) cut Bianca Devins's throat and posted pictures of her corpse to Instagram. #ripbianca. But cannabis never causes violence, right?

HOME > CULTURE > CULTURE NEWS JULY 15, 2019 2:53PM ET

## A 17-Year-Old Girl Was Murdered. How Did Photos of Her Death Go Viral?

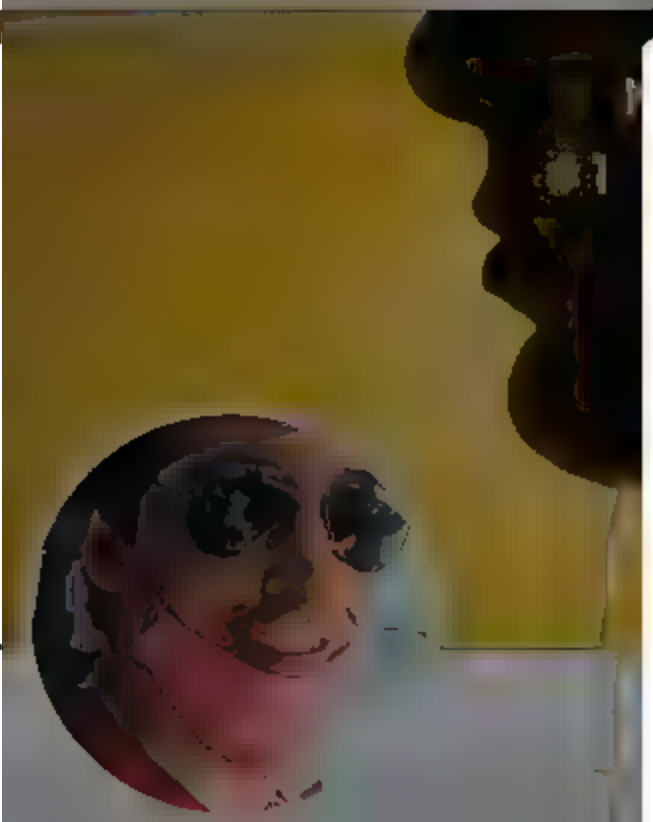
**Brandon Andrew Clark allegedly posted grisly, disturbing photos of Bianca Devins' body online**

*By* EJ DICKSON

murdered allegedly by an on-and-off male friend who then posted images of the slaying on Instagram, gaming website Discord, and 4chan, prompting an outpouring of shock and horror on social media.

The victim, Bianca Devins, is a 17-year-old so-called "tgirl" who lived in Utica, NY, and had a small following on Instagram under the name @bescy. Devins also frequently posted on the discussion forum 4chan. Utica Police confirmed Devins' death.

According to a statement sent to *Rolling Stone* from the Devins family, Bianca was "a talented artist, a loving sister, daughter, and cousin, and a wonderful young girl, taken from us all too soon." The statement also notes that Devins had just graduated [illegible] Doppelganger the night before the murder. Clark was supposed to be Devins' ride home. Chats said that Clark and Devins reportedly met up with another person, a male, at the concert. The three reportedly smoked weed in Clark's car together before Clark and Devins drove back to Utica around [illegible] pm.



In DMs with another friend on the Discord server that were shared with Rolling Stone, Devins makes reference to Clark being "so mad" that she'd had words with this person and kicked him at the show. The last message seen by Devins is timestamped 5:47 am, less than two hours before police arrived at the scene to discover her body.

And possibly they were Ross but you cite these cases as if violence and murder is a predictable outcome of cannabis use. There are a whole host of factors that cause ppl to become violent and the vast majority of cannabis users don't exhibit such behaviours.

1 1

**Alex Berenson**
@AlexBerenson

Replying to and 15 others

A straw man argument. Of course most cannabis users don't become violent. Most meth users don't either. (And most drunk drivers don't have accidents.) The question is whether there is population level risk, whether the link is obvious in individual cases, and what to do about it.

Nice to see we can agree on that then. Regarding what we do about it, we could stop criminalising ppl who develop problems with it for a start. If is 'defacto decriminalised' let's make it official.

Cannabis plus methamphetamine equals paranoia, psychosis, and random killings of innocent victims. Or, as @drcarlhart would say, drugs make joy.

**Man arrested in fatal shooting of driver near Big-I Monday**

By ABQJOURNAL NEWS STAFF

Published: Tuesday, July 16th, 2019 at 9:22am
Updated Tuesday, July 16th, 2019 at 10:24am

ALBUQUERQUE, N.M. – A 51-year-old man has been charged with an open count of murder and shooting at or from a motor vehicle after police say he shot and killed another driver near the Big-I early Monday morning.

Albuquerque police say Donald Duquette

The victim was found in the driver's seat of his work vehicle with what appeared to be a gunshot wound to the head. The driver's side door had multiple bullet holes, according to the complaint.

Duquette gave homicide detectives a bizarre account of the events leading up to the shooting.

According to the complaint:

Duquette told detectives he had gone to the southwest area of the city and smoked

Can you elaborate on this? I see rates in CO rising (more so that US total) until 2013-2014, when rates drop (more so than US total), both in absolute and relative terms. My (admittedly uninformed) search suggests CO voted to legalize in Nov 2012.

I suppose it's possible you will find a way to squeeze the data until it screams and make that top line finding disappear (as you did with the homicide and driving data). But why would you? Except to confuse people.

I'll say this, though: at least you have the guts to try to stand up for your totally ridiculous finding, while your coauthors hide.

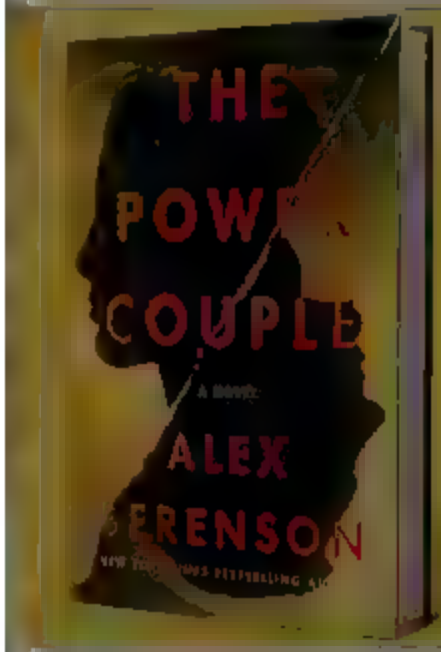
9:03 AM - 12 Jul 2019

1

**Alex Berenson** @AlexBerenson · 12 Jul 2019

Replying to

If you really care, you'll disavow this paper and run it again with the NSDUH data. Let the chips fall. The topline data is so against the legalization lowers use theory that I expect the finding will be the other way, maybe at stat sig, maybe within the confidence interval.



2

**Alex Berenson** @AlexBerenson · 12 Jul 2019

Or you can wait for me to do it and write another op-ed.

How about a longer period, @JAMAPediatrics. to catch legalization's effects more fully? Lucky us, @samhsagov has charted '09 to '17, bracketing legalization in the first four states:
It shows US monthly teen use -8%
CO -11%
AK -3%
WA +16%
OR +20% (!)

Hey [redacted] - your cannabis legalization and teen use paper is another [redacted] special. The top-line NSDUH data do not support the claim that teen use fell faster in the legalized states and in fact run the other way. Happy to discuss.

3 8 10

**Benjamin Hansen** @benconomics · 11 Jul 2019

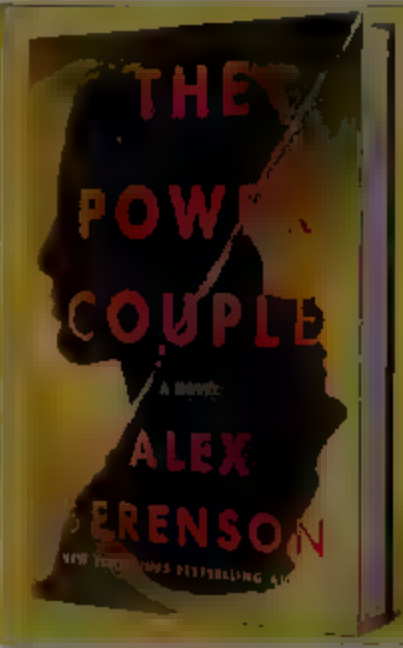
Write it up and analyse the data. Also compare the sample size and coverage of NSDUH vs. YRBS. YRBS focuses on kids and has much larger samples of teens than the NSDUH.

2 1

**Russ Kamer** @RussKamer · 11 Jul 2019

In your JAMA letter, you stated a decrease in teen use based on 7 RML states. Which states did you use & what were the before and after years? Also, what was the change in teen use in non-RML states during that same interval? Not clear from reading the paper. TY

1



**Alex Berenson**
@AlexBerenson

Replying to [redacted]

Here's what I can tell you for sure - they didn't include either OR or WA, because those two states didn't take part in either 2015 or 2017. This gets worse and worse. I hadn't thought so until now, but JAMA may have no choice but to pull the letter.

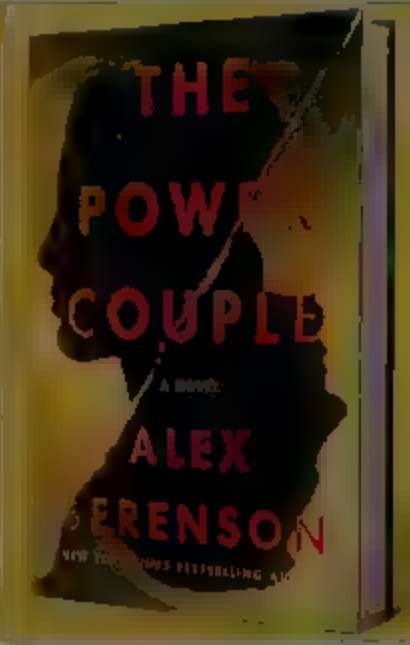
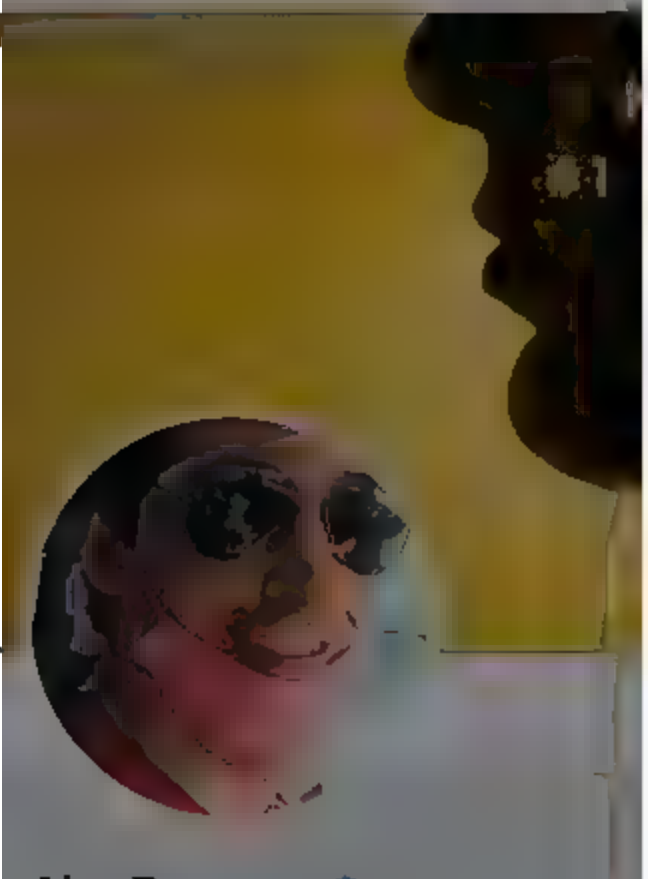
**Benjamin Hansen** @benconomics · 12 Jul 2019

Replying to [redacted]



Alex, we picked one of two standard datasets for studying teen drug use. One is the YBRS. The other is the MTF (which has very restricted access for you want individual states). NSDUH is sometimes used, but not as often because the populations are so much smaller.

**Benjamin Hansen** @benconomics · 12 Jul 2019



Replying to [redacted]

So Alex, again, do the data analysis with the NSDUH. If you download the data, I'll do it for you (sharing the code). But given the smaller sample size, I wouldn't be surprised if the confidence interval would end up very wide.

My response to this was very simple. Anyone can look at the NSDUH data from 2012 and 2017 and see that it says exactly what I say it does - that teen past month use in your home state of Oregon rose from 9.9% to 10.4%, while national use dropped from 7.6% to 6.5%.

Write it up and analyse the data. Also compare the sample size and coverage of NSDUH vs. YRBS. YRBS focuses on kids and has much larger samples of teens than the NSDUH.

Ben - why doesn't the letter include absolute levels in states with RMLs? Why doesn't it include your actual estimates of the relative changes instead of just a risk ratio? Why such odd state covariates (the beer tax)? Which states were included, and what years?

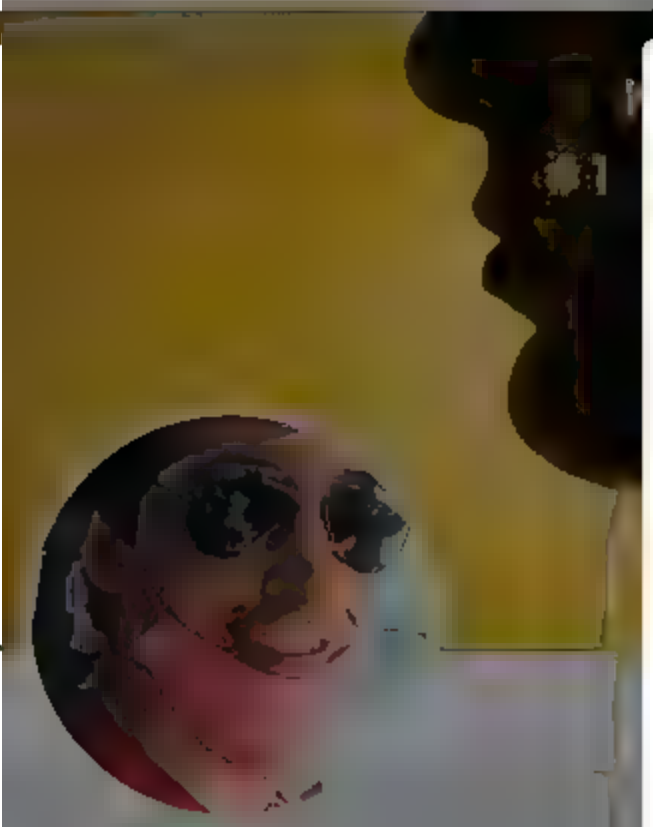
My response to this was very simple. Anyone can look at the NSDUH data from 2012 and 2017 and see that it says exactly what I say it does - that teen past month use in your home state of Oregon rose from 9.9% to 10.4%, while national use dropped from 7.6% to 6.5%.

2 1 5



**Alex Berenson** @AlexBerenson · 11 Jul 2019
Why is my presentation so easy to understand (and so congruent with the real world expectation that lowering prices and increasing the perception of safety will increase use) while yours is so impenetrable? Could it be because the basic facts support what I'm saying?

**Alex Berenson** @AlexBerenson

Hey @JAMAPediatrics - your cannabis legalization and teen use paper is another @benconomics special. The top-line NSDUH data do not support the claim that teen use fell faster in the legalized states and in fact run the other way. Happy to discuss.

Also Alex, if you trust all studies with the the NSDUH, then you agree NSDUH data clearly suggest young adults on average substitute alcohol for marijuana.

Just wrote a thread on teen cannabis use and why the JAMA paper "showing" legalization reduces it is wrong. The capsule version: monthly 12-17 use fell 14 percent nationally from 2012 to 2017. It fell about half as much in the first four legalized states. That's the real data.

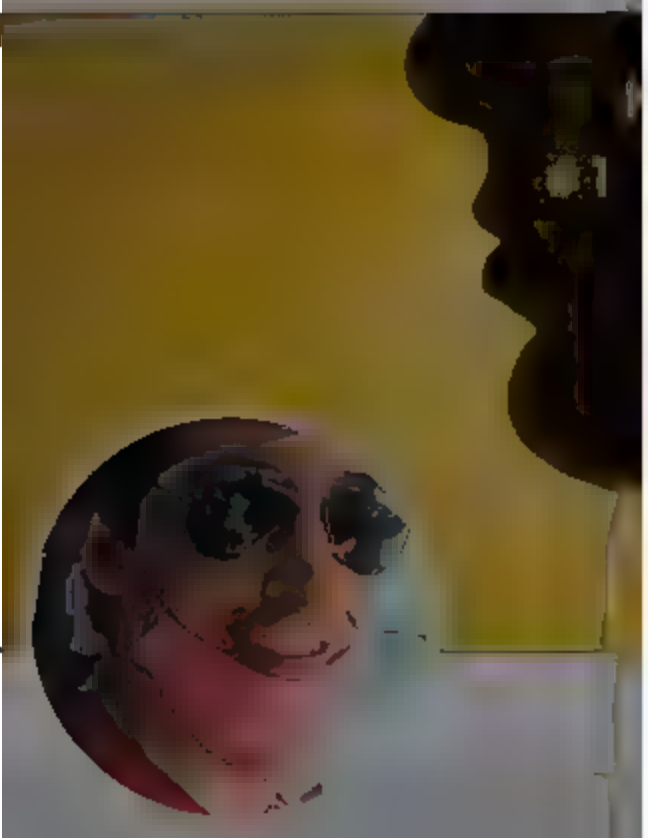
I would be a little shocked if legalization would LOWER usage... I have yet to see any compelling argument that it would increase it much at all.



From a supply & demand standpoint... I don't see how the supply was lacking!!

I've never heard of a shortage!!

12/ So in Colorado, monthly teen use dropped roughly in line with US trends. But in the other three states, use either fell less or ROSE:
In Alaska it fell about 12 percent.
In Washington it fell about 5 percent.
And in Oregon it rose 5 percent.

8/ It is also worth remembering the first four had among the HIGHEST national rates of teen use even before full recreational legalization. That's because they had "loose" medical laws with many dispensaries and a loud advocacy community even before they legalized...

1 1

**Alex Berenson**
@AlexBerenson

9/ And teen use was rising even before full recreational legalization in those states (a trend particularly notable in Colorado). But put that fact aside and just focus on the core "finding" in the JAMA Peds paper - what happened to teen use post-legalization?

1/ A look at the federal data on teen cannabis use makes obvious that the new JAMA Peds paper claiming legalization magically reduces teen use will inevitably go the way of the old (and now proven wrong) JAMA IM paper claiming medical legalization magically reduces opioid deaths.

1 2 6

**Alex Berenson**
@AlexBerenson

2/ The only question is how long it will take for someone to put the data in a form complicated enough to be acceptable to a peer-reviewed journal (and how much the industry will take advantage of this study in the interim).

11:16 AM - 11 Jul 2019

1

**Alex Berenson** @AlexBerenson · 11 Jul 2019

3/ But here goes. The only complicated part of this is understanding that teen use - for whatever reason - actually fell across the US for most of the last decade. (Again we don't know why, but teen behavior in general has generally been getting safer, HBO shows notwithstanding.)

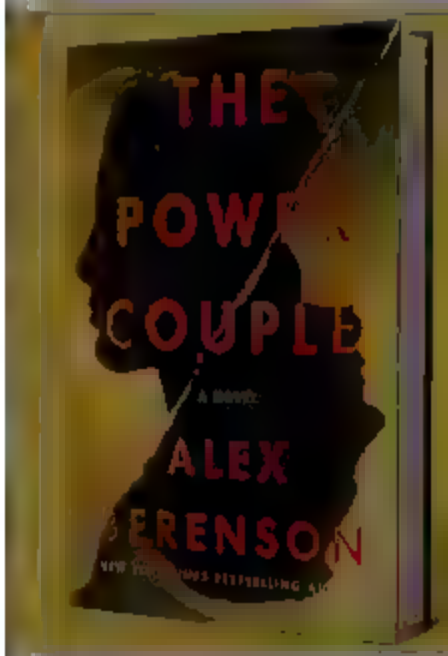
1 2

**Alex Berenson** @AlexBerenson · 11 Jul 2019

4/ The other important point to understand is that at this point we only really have meaningful post-legalization data on four states - Alaska, Colorado, Oregon, and Washington, all of which legalized in 2012 or 2014 and opened dispensaries in 2014 or 2015.

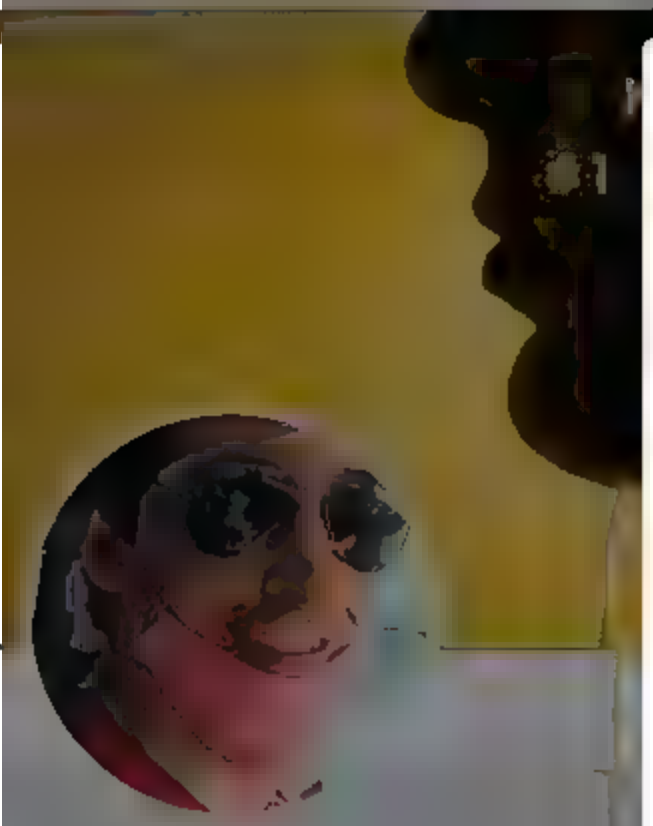
1 1

**Alex Berenson** @AlexBerenson · 11 Jul 2019



5/ So let's look at the best data: the federal National Survey on Drug Use and Health. It collects data every year but reports results in two-year sets to reduce sampling error. For 2011-12, the NSDUH reported past-month US marijuana use in 12-17 year-olds of 7.6 percent.

1



**Alex Berenson** @AlexBerenson · 11 Jul 2019

6/ For 2016-17, the comparable figure was 6.5 percent. (Btw, past-month use

Only one surprise in here: no explanation that "the groom's previous marriage ended in divorce." Bc that has to have happened, right? This can't be "Skylar's" first trip to the rodeo. (Tho maybe he wouldn't get on with "you will be my girlfriend" if he'd been married before.)

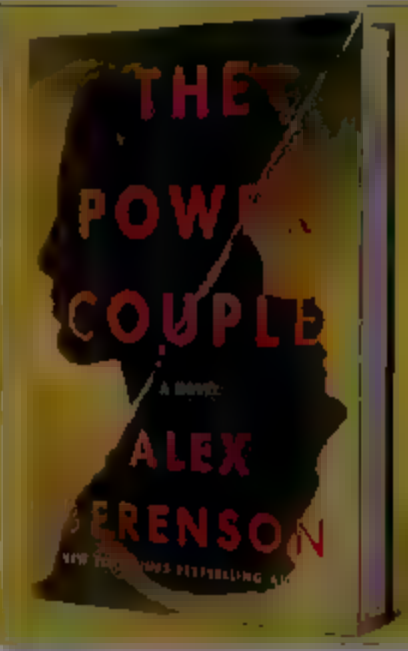
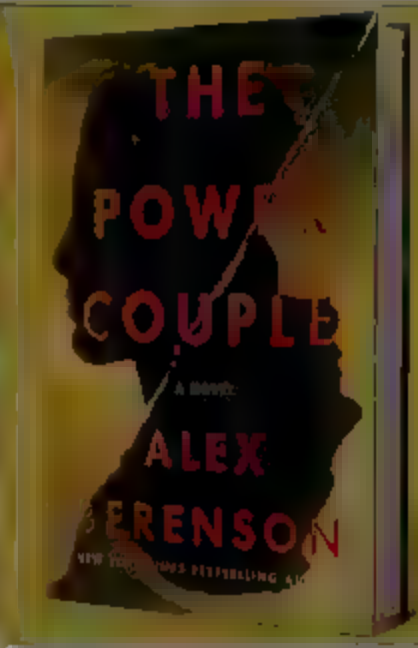
Matt, I think I'm gonna block you so you can stop worrying about me and get on with your life.

8 6



**Matt Elrod** @melrod42 · 10 Jul 2019

Replying to



Residual solvents are a consequence of sloppy extraction, which is a consequence of prohibition. Legally regulated extracts, like Sativex, which is medicine, are made with CO2 extraction, and are no more "semi-synthetic" than distilled alcoholic beverages.

Replying to

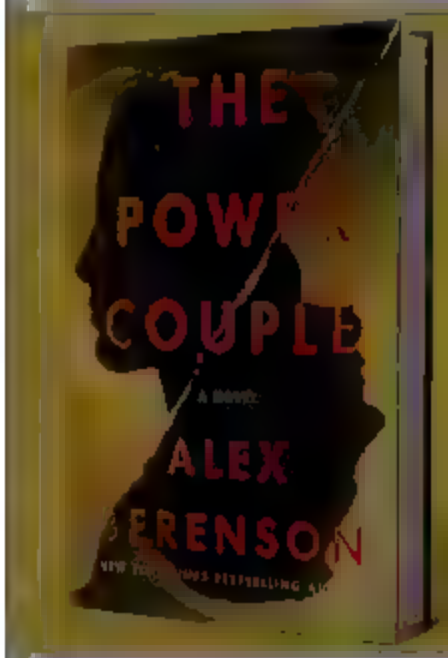
Yeah. I call it cannabis. Like I call cocaine cocaine and not coke and heroin heroin and not junk or anything else. Dangerous drugs should be treated seriously and not glamorized. The more interesting question is what to call the semi-synthetic extracts.

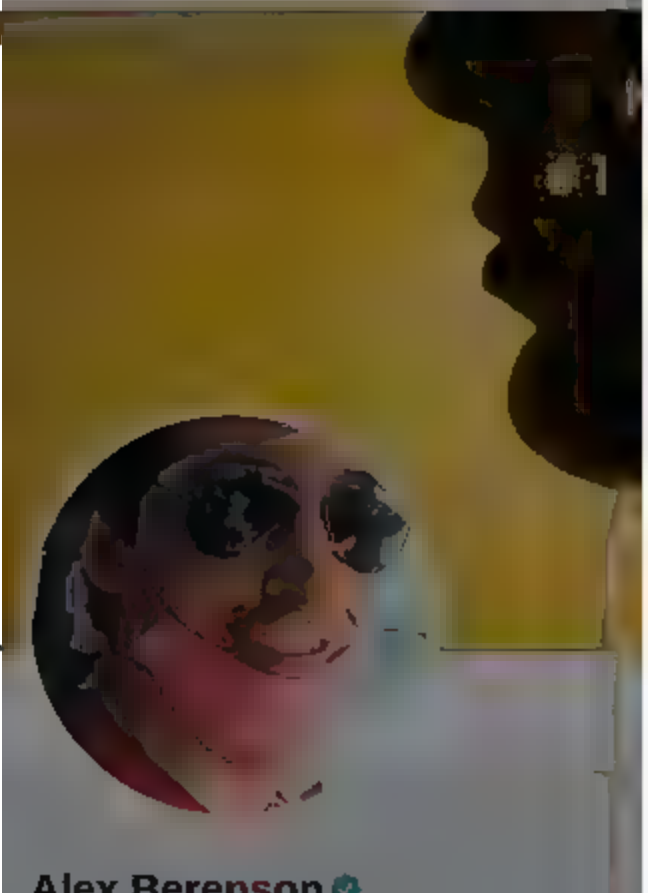
7:22 AM - 10 Jul 2019



1

**Doctor Danger, Parish of TERFs Can Go Rot In Hell** @Ef... · 10 Jul 2019

Replying to



The synthetic compounds can be called what they are: Pharma-experimental garbage. They're dangerous enough to earn that title, and we'd do well without them giving cannabis a bad rep.

@AlexBerenson

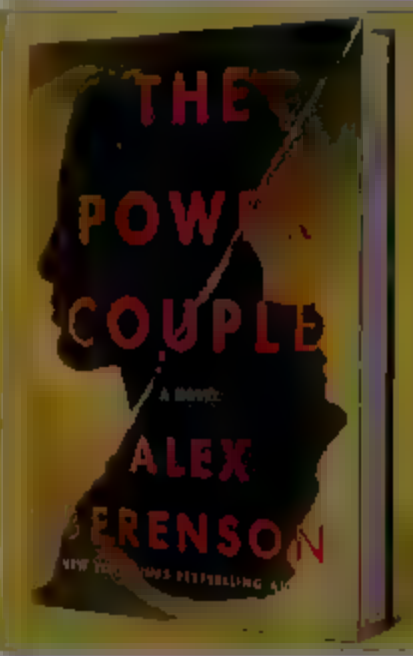
Replying to [redacted]

There's some truth in this. Some states clearly reach a kind of quasi-legalization before they get to full legalization, and those tend to have lots of teen use. You're right too that given the issues I raise, I might have expected to see rising post-legalization teen use.

8:47 AM - 9 Jul 2019

1

**Alex Berenson** @AlexBerenson · 9 Jul 2019



Replying to [redacted]

The math is a bit tricky because teen use of alcohol and cigarettes clearly fell for much of the last 15 years (risky teen behavior in general fell), so flat cannabis use means cannabis is becoming more popular relative to other drugs - in both legalized and other states.

11/ 12-17 year-olds in those states were up to 45 percent more likely to use cannabis than the national average. Know what those states have in common? Not geography, not the presence or absence of large cities, not wealth. Nope. But they all have legalized cannabis.

4/ The first is that licensed dispensaries won't sell to teenagers, but drug dealers will. Let's assume that theory is 100 percent correct. In that case, DOES LEGALIZATION ELIMINATE THE DEALERS WILLING TO SELL TO TEENAGERS? Of course not!

3 1 14

**Alex Berenson**
@AlexBerenson

5/ Those dealers just walk into dispensaries, buy, and sell to teens, rather than having to source their cannabis on the black market. And guess what, they are paying less and running less risk, so the prices they charge are going to fall.

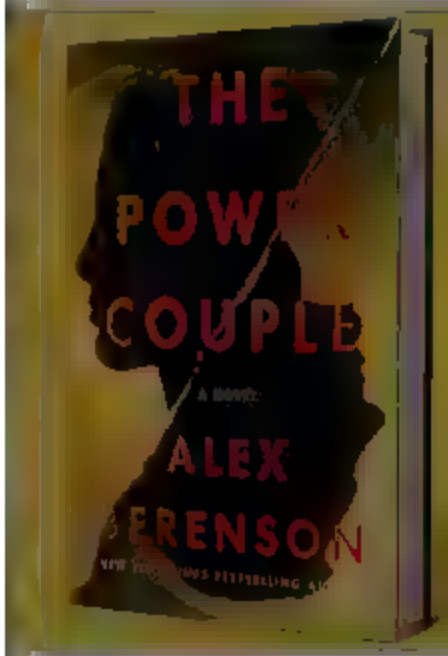
**Alex Berenson** @AlexBerenson · 9 Jul 2019

6/ The other theory is that legalizing somehow makes cannabis less cool to teens. Oh no, dad's smoking pot, I don't want to! Sure. That's why drug use almost always rises and falls in tandem among age groups - whether marijuana in the 1970s, cocaine in the 1980s, opioids now...

1 1 10

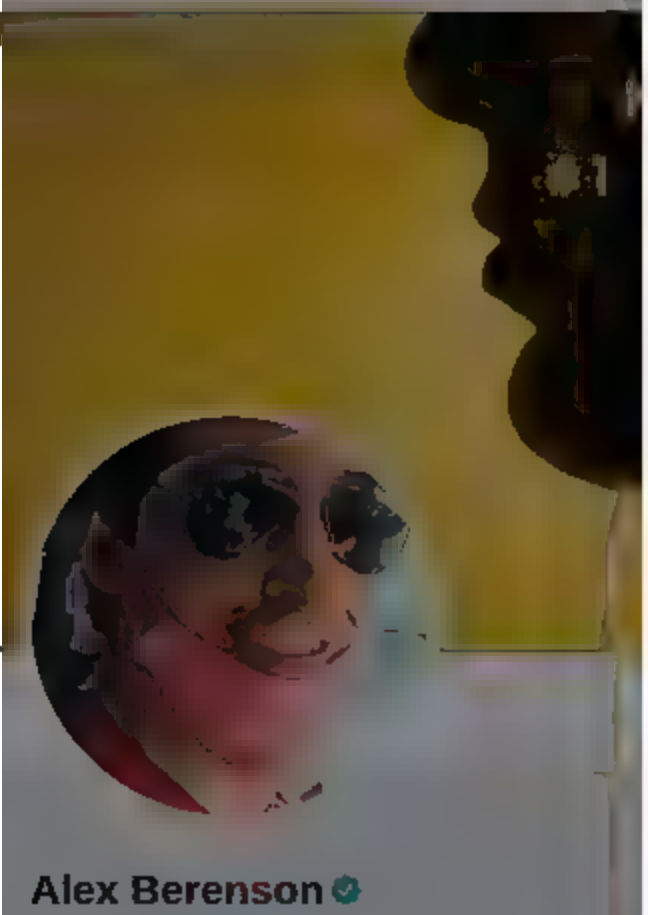
**Alex Berenson** @AlexBerenson · 9 Jul 2019

7/ Teens don't care what their parents are doing. They care what young adults are doing, because they want the privileges adulthood brings. And legalization unquestionably drives rising use among young adults.



2 2 13

**Alex Berenson** @AlexBerenson · 9 Jul 2019



8/ Okay, so in the real world there's basically no reason to think that legalization will reduce teen use. How did this paper find such a result? A couple nifty tricks.

2/ You may remember Ben as the guy who said legalization wasn't tied to a rise in THC-linked driving deaths when his own paper said that it was responsible for half the rise. Or the guy who used the wrong data set to look at changes in murder rates and never fixed his mistake.

3 2 12

**Alex Berenson**
@AlexBerenson

3/ Now Ben and other scholars have written a paper supposedly showing recreational legalization actually reduces teenage cannabis use. Okay, what would the mechanism be here? I've heard two, both equally specious after oh about three seconds of thought.

Cannabis edibles: a super-good idea, especially when kids are around. Can we permanently stop arguing about the biological effects of THC? It's psychomimetic, even in kids way too young to understand what psychosis is, or what's happening to them.

western Perth.

The mother says she, her then-five-year-old daughter Emily and three-year-old son Thomas all ate part of the same brownie at the cafe, which advertises itself as a "locally owned family business" that is kid-friendly, with "toys and colouring in to keep the little ones happy".

Shortly after breakfast, the little girl began behaving strangely, and told her father she was seeing things that were not there.

"It was very frightening. I was trying to calm Emily; she would calm down, and then she would just open her eyes and give out this blood-curdling scream," Emily's mother told ABC Radio Perth.

went from 'I'm seeing bizarre colours', to losing her short-term memory, really intense fear, disorientation, it was really quite extreme."

Her father said when she first began hallucinating, he feared she had sustained a brain injury.

From the get-go, his business was successful. But the conditions for investing with Epstein were steep: He would take total control of the billion dollars, charge a flat fee, and assume power of attorney to do whatever he thought was necessary to advance his client's financial cause. And he remained true to the $1 billion entry fee. According to people who know him, if you were worth $700 million and felt the need for the services of Epstein and Co., you would receive a not-so-polite no-thank-you from Epstein.

Replying to [illegible]
Even if prohibition decreased accessibility - and it doesn't - it competes and interferes with research and education. Dutch teens use less cannabis than U.S. teens, despite or because of cannabis "coffee shops" for adults making it boring.

The piece also nicely puts the way cannabis is now advertised in context. And, sadly and inevitably, she feels the need to keep her cool credentials by explaining at the end that "I'm pro-weed... it's not marijuana's fault." Still very much worth a read

About 5.6% of users develop a problematic relationship with the drug - under half the figure for alcohol.

That recovering addicts shouldn't smoke weed really isn't breaking news

Thanks Alex. Test-retest studies show that the radiotracers are reliable in healthy volunteers over time & there is longitudinal work showing that cannabis abstinence normalises cb1 levels. No studies in cannabis users with/without psychosis. Would be very interesting!

Marijuana's not addictive. Just ask @shutupmay, who wrote this excellent piece for @_TheFix about her effort to replace alcohol with cannabis. Spoiler alert: it went great! "Long stretches of panic and paranoia, crippling depression... and isolating myself from people."

# Cannabis doesn't cause psychosis. Just ask Reddit users on r/psychosis! (And thanks to @ErikMessamoreMD for trying to give thoughful professional advice.)

First thing you should do is go see a psychiatrist. The first thing they'll tell you is to stop smoking weed. For me the psychosis started right after I stopped smoking weed. Unfortunately weed stays in your body fat and takes a long time to dissipate. They might give you medication depending on the severity of your psychosis. It takes time to heal but eventually everything gets better. It's hard to say goodbye to weed, but some people are just kind of allergic to it, and it will induce psychoses. You're probably, like me, one of those people. The important thing is to talk to people you trust about this. Close friends, family, tell them you think you're a little crazy and need help. If your family doesn't know that you smoked weed it's best to let them know. They will help you. Good luck

I smoked a normal amount one night and had a full blown panic attack. I hang out with a group of stoners and they didn't really understand what I was going through (extreme paranoia, hearing shit, depressive moods while high) so they convinced me to continue to smoke. My dumbass dad ll so take put me on probation. By late I mean my dumb ass driving around with weed in the car. I had an involuntary smoke break for about 9 months and when I got off of course I celebrated with a blunt. It wasn't the perfect high I once remembered, but it was damn sure better than it was before getting out on probation. Fast forward to me falling into my old habits and of course the psychosis comes back, but worse this time. Even sober I was experiencing negative symptoms (obsession over going crazy, being confused about normal things, paranoia, etc). Trust me smoking and having a bad high isn't worth it. Take a long break, focus on where you want your life to go and take actions to get there. Weed isn't gonna help you like it used to. And maybe one day it will. Give your brain time to heal and get back to normal. When it does take it slow. Dont rush it and get fried every day. There will be good days where u just want to chill and smoke a blunt. Those are the worst because I always felt as tho I was ready to smoke again and would spark up just to have my day instantly ruined. It took my a while to come to terms with the fact weed isn't for me anymore, and might never be but I'm focused on more important things now. Find your thing (.

Thanks for the feedback, genuinely appreciate it. I seen a psychiatrist the beginning of this month (how I was diagnosed) and she said exactly that. I'm just having a hard time grasping how it always had a good effect on me until recently. I guess I'm looking for answers to make it easier to let go of it.

Coming from a Phillies fan born and raised at least you don't have to watch Gabe Kapler manage a $500 million team into 3rd place. Between him and analytics-led baseball, it's insufferable.

Classic bullshit. As described, it's not placebo-controlled, the responses weren't graded independently, and side effects aren't mentioned. Parents who wanted to find CBD would help their kids... found CBD helped their kids. Worse than useless. It's not research, it's marketing.

1 7

**Jerome D. Grazioli** @grazioli_jerome · 6 Jul 2019
Do you think there is any merit to further research of cannabis compounds as treatment for autism?

1

**Alex Berenson**
@AlexBerenson

Replying to

Of course. But that doesn't mean any cannabinoid will ever work. And in the interim parents should not be running uncontrolled human experiments on their kids. Especially not with THC, which is a hugely problematic chemical.

Note to reporters at general interest papers covering cannabis: any MJ advocate who says rates of psychosis/schizophrenia have not risen despite rising use is at best misleading you - as with so much of what advocates say. I am glad to walk you through what we know, and don't.

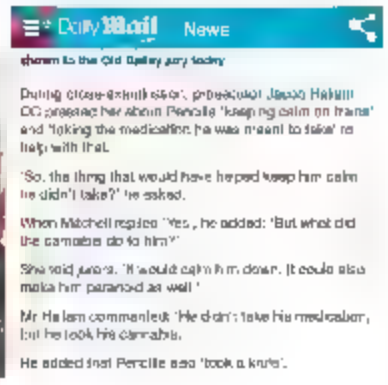
Back in London: "He didn't take his medication, but he took his cannabis." Cannabis causes psychosis. Psychosis causes violence. Every day, all over the world.

FREE - On the App Store

DailyMail.com News

Train passenger accused of murdering father, 51, by stabbing him 18 times 'smoked cannabis every day that could make him paranoid'

By Jack Newman For Mailonline
13:07 EDT 04 Jul 2019, updated 13:07 EDT 04 Jul 2019



Jurors were handed a 17-page bundle containing the pictures, which included 'sick-looking' knives and another depicting a gloved hand holding a knife (pictured)

'When he said someone was following him, that was not something he would normally say,' Mitchell continued.

'It would normally be there was a lot of people around him, not following him.'

Mr Morse asked: 'At some point in the call did he tell you he was hearing voices?'

Mitchell said he did: 'He's told me many times before.'

DailyMail News

shown to the Old Bailey jury today

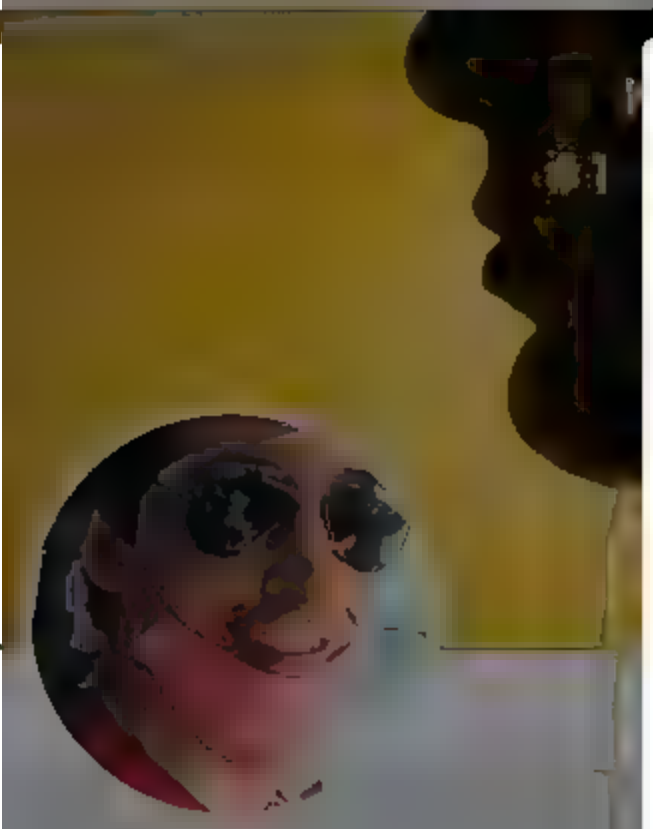
During close-knit sister, prosecutor Jason Hallam QC praised her about Perolls 'keeping calm on trains' and 'taking the medication he was meant to take' to help with that.

'So, the thing that would have helped keep him calm he didn't take?' he asked.

When Mitchell replied 'Yes', he added: 'But what did the cannabis do to him?'

She told jurors: 'It would calm him down. It could also make him paranoid as well.'

Mr Hallam commented: 'He didn't take his medication, but he took his cannabis.'



He added that Perolls also 'took a knife'.

Easy to joke about Rob Corry, visionary cannabis lawyer. Or to figure he's just a [libelous word here] who has it coming. But the fact is he's behaving like he is very, very sick and needs help before he kills himself or someone else. I hope he gets it.

I don't know how many Americans cannabis kills each year. No one does. I'm hoping to get funding to study murders, suicides, crashes, MIs, etc and make an estimate like the one for alcohol.

A big, complex project, but worth the trouble.

Meantime, what I do know: It's not zero.

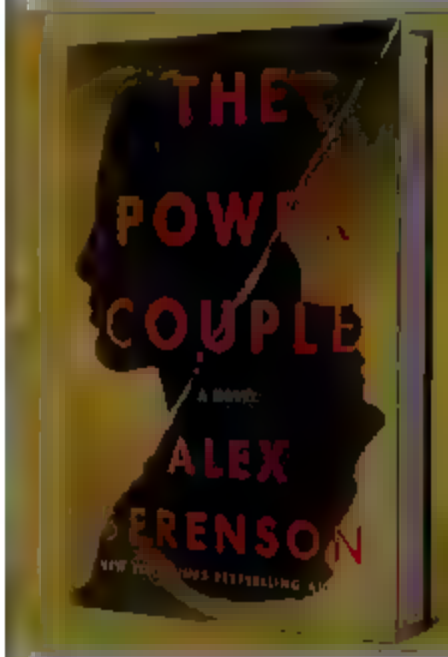
Pretty much. The cannabis lobby wants to avoid a bright-line standard of blood THC above which intoxication would be presumed - as there is for BAC. The theory is that heavy users have higher tolerances. Try making that case for alcohol.

10:19 AM - 3 Jul 2019



2

**Matt Elrod** 🇨🇦 @melrod42 · 3 Jul 2019

Replying to [redacted] and 2 others

The scientific consensus is that, due to pharmacokinetics and tolerance, THC levels aren't an accurate proxy for impairment the way BAC is an accurate proxy for impairment. Also, alcohol impairs much more and impairs self-assessment.

Hey @DanaLarsen - do you want to be the one to give the Bramblett kids the good news that the driver's cannabis intoxication may not have been what caused him (allegedly) to speed into the back of their parents' car and kill them, or should I?

Mark Schlabach
ESPN Senior Writer

Police on Monday arrested the 16-year-old driver of a car that was involved in a fatal wreck that killed longtime Auburn radio announcer Rod Bramblett and his wife on May 25.

The Auburn Police Division said in a statement that Johnston Edward Taylor of Auburn was arrested at his home on Monday. He is charged with two counts of manslaughter and was being held at the Lee County Jail on $50,000 bond.

Bramblett, 53, and his wife, Paula, 52, died from injuries sustained in the car wreck on Shug Jordan

vehicle was "traveling at an excessive rate of speed, well over the posted 55 mph speed limit, when the crash occurred."

The statement said a toxicology analysis from the Alabama Department of Forensic Sciences confirmed "the presence of marijuana in Taylor's system."

Rod Bramblett was airlifted to UAB Hospital in Birmingham, where he died of a severe closed head injury, the coroner's office said. Paula Bramblett died of multiple internal injuries in the emergency room of East Alabama Medical Center.

Bramblett served as the lead announcer for Auburn football, men's basketball and baseball. According to

Another point about the economics of cannabis - the lifetime cost per US case of schizophrenia is probably well over $2 million - several hundred thousand dollars in direct costs for hospitalization, medicines, community care, etc - plus $1-2 million in lost lifetime wages...

4 13 18

**Alex Berenson**
@AlexBerenson

So it would take very few additional schizophrenia cases annually to get to huge cannabis-associated costs - and that doesn't account for ANY other problem associated with the drug.

But even if cannabis legalization is a net economic benefit - and I doubt it is - that's not how we should judge its overall success. Fun fact: most economists agree cigarettes have huge economic benefits because they mostly kill retirees, who are a net drain on the system...

3 1 9

**Alex Berenson** @AlexBerenson · 1 Jul 2019

And until recently, lung cancer was a very fast illness treated mostly with cheap chemotherapy. Less tobacco means people live longer and more government spending. Would anyone argue for encouraging cigarettes on that basis?

Economics are one of several considerations when evaluating policy options. In Canada, we were spending about $328 per consumer year failing to prevent about $20 per consumer year in social costs, while raising no offsetting tax revenue.

Turns out the impaired driving issue resonates deeply with voters - bc it reveals how little cannabis advocates (and their academic pets) care about public health.

The fact that their first response is to make excuses rather than agree drivers shouldn't use THC is so telling...

Makes total public policy/legal sense to assume the THC in this woman's blood had nothing to do with her getting upset and running head-on into a motorcyclist, amirite?

"Another driver cut her off. She said she got angry and decided to pass..."

One of these things is not like the other. People don't just get randomly stopped for driving under the influence. They are tested after accidents – or because they are driving in ways that are inherently obviously dangerous, such as speeding, weaving, tailgating, etc.

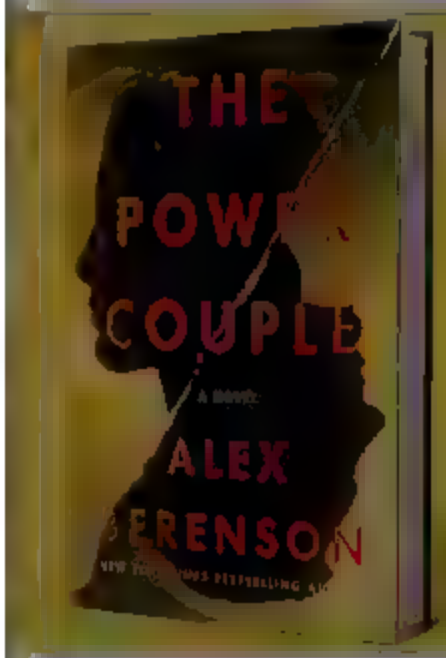
Okay, I think I need a new academic sparring partner on cannabis and driving/crime, because I don't want to keep picking on @benconomics. This last statement of his is so silly that I almost don't know where to begin. Nonetheless, he brought it up, so here goes...

Replying to @AlexBerenson



Alex can you not agree that both Type I and Type II errors (wrongly convicting sober drives who used pot that had no affect on accidents and not convicting those who were under the influence) are both big problems. We need better tests and tax rev should go to this.

Ben is using quasi-scientific lingo here, comparing Type I and II errors. Doctors call these "false positives" and "false negatives." Both cause problems. A falsely positive cancer test may frighten healthy people into thinking they have cancer (and lead to pointless procedures).

Tonight's thought experiment - imagine the response if the alcohol industry or health experts argued a bright-line BAC cutoff of .08 was unfair to heavy drinkers because they have higher tolerances. Yet supposedly serious academics say a single THC standard is unfair. Bottoms up!

They test for the active metabolite as well as COOH. Advocates have this backwards (big shock). Because of the post-crash time lag for testing, having only COOH but not THC is NOT proof you weren't impaired during an accident - it's evidence you might have been...

2 1

**Alex Berenson** @AlexBerenson

Replying to [redacted] and 2 others

But having the active metabolite in your blood is proof that you were under the influence at the time of the accident (unless you used after bc you were so upset). What guys like @benconomics I say is that people can have different levels of impairment at the same THC level.

6:11 PM - 29 Jun 2019

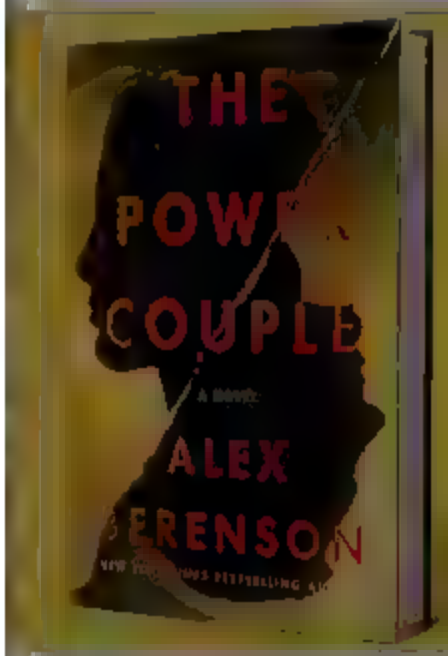
Is it possible for a metabolite to be "active"?

1



**Derek Subotcki** @InsiderSubo · 29 Jun 2019

No. A metabolite is a byproduct, left behind upon the consumption/utilization of the THC elsewhere. It is *in no way* indicative of being under the influence at the time of the test.

THC tests do not test for active THC. They test for THC metabolites, which are the remnants of active THC.

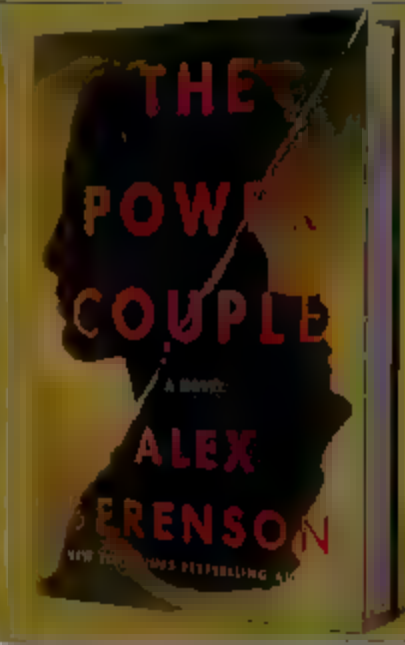
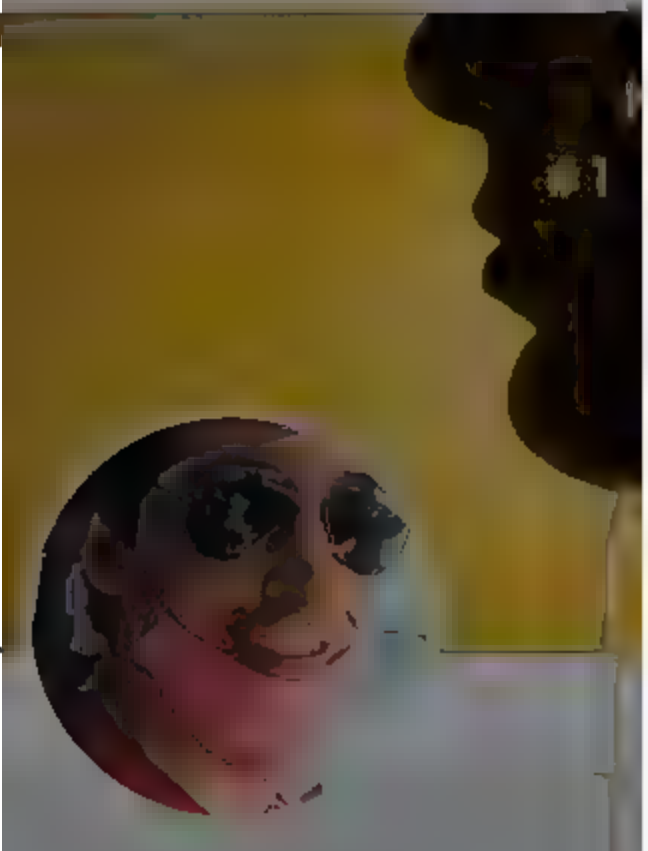
**Xeno (Linhart) Rasmusson, B.A., M.S., Ph.D.** @iXeno · 28 Jun 2019
Replying to



In WA, "More than half of drivers in fatal crashes positive for delta-9 THC were also positive for alcohol. Most (84%) of these drivers had a BAC greater than 0.08." and "Overall, alcohol is three times more prevalent among drivers in fatal crashes than delta-9 THC."

2

**Xeno (Linhart) Rasmusson, B.A., M.S., Ph.D.** @iXeno · 28 Jun 2019
Replying to



You are quite good a cherry-picking data points for maximal fear. In this same time frame: 1 million more residents in WA + legal weed + improved THC testing. But alcohol 3 still times more likely in fatal crashes. This is your own source:

The challenge is alcohol's linear decay rate and strong correlation between BAC and accidents. Marijuana's decay rate is non-linear. We need better measurement for sure of what is impairment and what isn't.

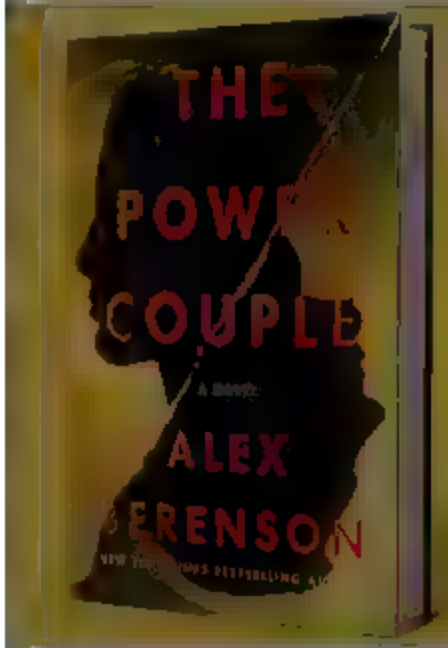
1 1

**Alex Berenson** @AlexBerenson · 28 Jun 2019
Ben - I'm not really interested in your views on alcohol's "linear decay rate." You're not a toxicologist or an expert on subjective drug impairment. But you're supposed to be an expert on data. So, tell me, is 101 more than 38? Is 59 more than 19? 31 more than 8?

3 2

**Alex Berenson**
@AlexBerenson

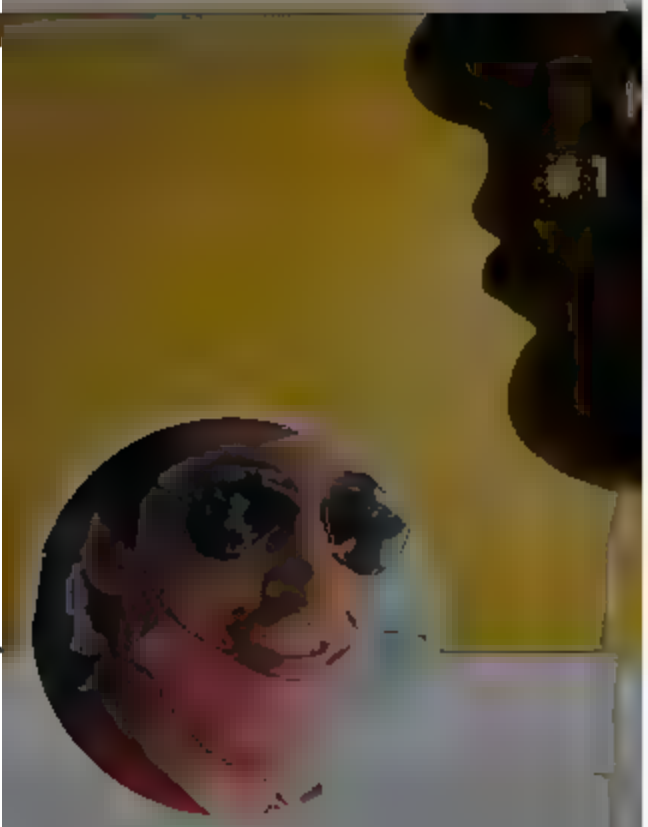
Replying to [redacted]



Because I have to say: at this point there's nothing intellectually bold or radical about being a social scientist who ignores data to argue in favor of cannabis. Quite the opposite. Have you noticed your peers? A different kind of tragedy of the commons.

4:25 AM - 28 Jun 2019

1



**Benjamin Hansen** @benconomics · 28 Jun 2019
Replying to [redacted]
I supervised a Ph.D. candidate who found DV increased with cannabis legalization. How is that ignoring data?

So [redacted] is among the smarter, more honest canna-journalists... which is why he winds up writing tortured paragraphs about cannabis and violence like this one (subtitle: I wish Tell Your Children were wrong, but deep in my heart I know it's right...)

google.com

theguardian.com

combustible mix.

Earlier this year, the former New York Times reporter Alex Berenson published a book Tell Your Children which attempts to link marijuana use with acts of extreme violence. The book has been widely criticized, but one need not fully subscribe to Berenson's alarmism to recognize the potential hazards of pot and guns. In one notorious 2014 incident, which Berenson details at length, a Denver man who ingested too many edibles, got into the gun safe and fatally shot his wife.

Americans have also adjusted to a world where random mass shootings have become commonplace. Some of these shooters have been users of cannabis and other drugs. In the politics of the moment, cannabis has not received much of the blame as it relates to these massacres.

More cannabis-enhanced caregiving, another dead child: "after placing the gun on the bed, he left the room to smoke marijuana..."

**Kenosha brothers charged after 5-year-old shot himself while playing with gun and died at the hospital**

POSTED 1:47 PM, JUNE 20, 2019, BY AARON MAYBIN AND KATIE DELONG, *UPDATED AT 03:47PM, JUNE 20, 2019*

Thursday, June 20 against two Kenosha brothers arrested in connection with the death of 5-year-old Daniel Weldon, who suffered a fatal gunshot wound during the June 17 shooting incident that occurred inside a residence on 60th Street near 22nd Avenue in Kenosha. Authorities said Weldon was then transported to the hospital by two individuals who then left.

Javonn Cannon, 24, faces one count of homicide by negligent handling of a weapon, repeater, and one count of possession of THC, repeater.

Javonn Cannon, 24, faces one count of leave/store loaded firearm near child.

According to a criminal complaint, the 5-year-old boy was pronounced dead at Froedtert South Hospital around 2:15 a.m. on June 17.

The 5-year-old and the Cannon brothers cleaning and moving stuff around the room. He said he saw Javonn Cannon load the gun and set it on the bed before the 5-year-old picked it up and began playing with it. The older brother said he told the 5-year-old to come watch TV, but he continued to play with the gun in the bedroom. He said the Cannon brothers were in the room when the 5-year-old played with the trigger and the weapon fired, hitting the boy.

"When the court reads this criminal complaint, I assume that's reading was of heartbreaking stupidity for the two adults who have criminal liability in this case," said the district attorney. "It appears that it was an accidental discharge of the weapon. An accidental death.

Javonn Cannon told his brother, Jaylonn, that a 9mm pistol under his bed. The complains said Javonn

@AlexBerenson

Now it's just an embarrassment. Erm, did we say schizophrenia, as in a diagnosis? We meant "risk of schizophrenia" - not actual cases. Oopsie. The paper should be retracted and all the slavering canna-journalists who covered it should update their stories. Don't hold your breath.

mail-attachment.googleusercontent.com

• The original article was published on 27 August 2018

Correction to: Nature Neuroscience https://www.nature.com/articles/s41593-018-0206-1, published online 27 August 2018

In the version of this article initially published, several occurrences of the word 'schizophrenia' should have more accurately been worded as 'liability to schizophrenia' or 'schizophrenia risk' including in the title. Specifically, in the dataset used for the genome-wide association meta-analyses of cannabis use, only a small proportion of the participants will actually have been diagnosed with schizophrenia. Therefore, it is more precise to say that the analyses reported in the paper show that the 'liability to

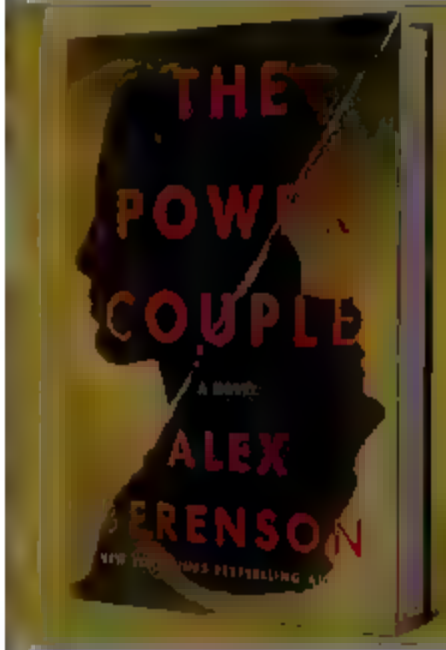
This paper purporting to show that schizophrenia drove cannabis use rather than the other way around is much loved by the cannabis community. It was always, for lack of a more scientific term, high-grade bullshit, for several reasons too complicated to explain on Twitter...

**psychiatric traits, and a causal influence of schizophrenia.**

Pasman JA, et al. Nat Neurosci. 2018.
Show full citation

**Abstract**



Cannabis use is a heritable trait that has been associated with adverse mental health outcomes. In the largest genome-wide association study (GWAS) for lifetime cannabis use to date (N = 184,765), we identified eight genome-wide significant independent single nucleotide polymorphisms in six regions. All measured genetic variants combined explained 11% of the variance. Gene-based tests revealed 35 significant genes in 16 regions, and S-PrediXcan analyses showed that 21 genes had different expression levels for cannabis users versus nonusers. The strongest finding across the different

The media needs to stop calling this new form of the drug marijuana. Call it "high potency THC" or something, so people don't confuse it with the weak, half oregano, joints they smoked in high school.

Nobody will understand that this is a different drug until it has a new name.

the kid is getting the help after some real bad stuff. i grew up w guys who were addicted heroin. the pot today is in that general area

2

**Alex Berenson** @AlexBerenson · 17 Jun 2019

I know - people who only smoked a bit in the 80s and 90s don't get it. The new high-THC/low CBD stuff is both dangerous and seriously addictive for many users - people have told me they have had an easier time quitting opioids or cocaine.

because alcohol is legal. Not because it's medicine, or close to harmless - but because we tolerate lots of morbidity and death from alcohol. I don't think that's a great reason, but at least it's honest.

6 3 12

**Alex Berenson** ✓
@AlexBerenson

Replying to

Henry - do you really think cannabis is "shunned"? The elite media and Hollywood have promoted it avidly for 15-20 years; the promotion has accelerated as the science around its harms has mounted. Many parents now think cannabis is a safe alternative to alcohol for their kids...

Alcohol can damage brains, young and old, but the evidence that cannabis is much worse is rising quickly. Alcohol causes psychosis only in rare instances, or in late-stage alcoholism. Obv cannabis is not as physically damaging, but the high-THC products raise even more problems.

6 3

**Alex Berenson**
@AlexBerenson

Replying to

As I say at the end of the book, the best reason to legalize cannabis is because alcohol is legal. Not because it's medicine, or close to harmless - but because we tolerate lots of morbidity and death from alcohol. I don't think that's a great reason, but at least it's honest.

"Corry said he was being chased by 'Arabs' and that they had a helicopter..." Hmm. Doesn't sound like cannabis psychosis at all.

**Attorney for suspect in fiery I-70 crash charged with kidnapping, vehicle theft at DIA after reportedly hitting vehicles, threatening ex-fiance**

As Robert Corry left the airport earlier this month, he reportedly said he was being chased by "Arabs" and that they had a helicopter.

CRIME

Sonia Gutierrez, Amanda Kearny, Doris Johnson

10:44 PM MDT June 16 2019

2:02 PM MDT June 15 2019

DENVER — The attorney representing a man accused of

The Denver Police Department responded June 10 to a report of a kidnapping at DIA. The victim was Corry's ex-fiance, who was to pick up Corry after his flight arrived the airport, according to an arrest affidavit.

At DIA, Corry said he was being chased by "Arabs" and that they had a helicopter, according to the affidavit. He grabbed his ex-fiance's hand and said they needed to run to her car. After saying she couldn't drive, Corry drove her vehicle aggressively with the victim in the vehicle. He honked the horn, hit vehicles and yelled at people while exiting the short-term parking garage, documents show.

Corry drove through a gate arm and over a cone, causing the windshield to break, the affidavit states. When the victim asked to get out of the vehicle, Corry

From my pov, DPA is damaging its own cause - not just for cannabis but other drugs. If you want to be "science-based," you have to admit when the science is problematic. Doesn't mean you can't favor legalization - but this denial of a real danger risks a huge public backlash.

There's a worse problem on the prohibition side, whose proponents seldom if ever acknowledge or accept the evidence against their position, but if it hasn't happened by now, I doubt either side cherry-picking will cause a huge public backlash. You've got the POV of a newcomer

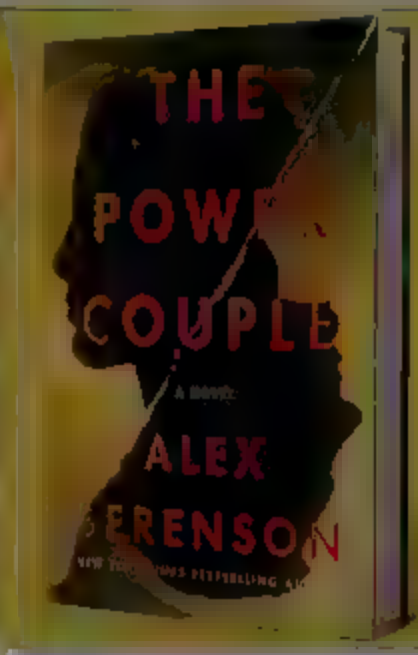
A little secret: modern high-THC cannabis is rarely laced. It produces psychosis all by itself. But the cannabis lobby is so good at yelling that it can't that they've even confused the cops.



We need tox screens in all these cases. With public results.

Back in Montgomery County, Maryland, prosecutors say that EVERY drug-related murder for several years involved cannabis. Not cocaine. Not opioids. Cannabis. So much violence around this nonviolent drug. Can't possibly be causal, amirite? That's just Reefer Madness.

**trend**

Montgomery County State's Attorney said over the last several years, the majority of drug-related homicides in his community have been tied to marijuana.

John Henry
11:30 PM EDT June 11, 2019
11:41 PM EDT June 11, 2019

MONTGOMERY COUNTY, Md. — A Montgomery County jury found a Silver Spring man guilty of murder Tuesday for his role in a violent drug deal.

Kairee Dorsey had been accused of shooting Andrew Turner, 18, of Germantown, in December 2017.

"This is another example of a drug deal regarding marijuana gone bad," he said.

McCarthy said Turner's murder fits into a disturbing pattern that his office has observed across Montgomery County.

"In the last several years, not five or seven, we could not think of a homicide related to the distribution of drugs where the drug distributed was not marijuana," he said.

McCarthy did not say he was against the state's policies on medicinal marijuana. However, he said the existence of legal dispensaries in the state have yet to curb violence related to the drug.

"The problem with the marijuana being dispensed so far is that one - it is expensive," he said. "And, two - it's not very good. And, as a result the black market for marijuana is still flourishing and it is increasingly at least

Just for the record and to introduce a few facts into the conversation (don't worry, you won't remember them): actual driving deaths in CO in 2013: 482. In 2018: 628. In WA in 2013: 436. In 2018: 565. In OR in 2014: 357. In 2018: 468. You can return to shouting nonsense now.

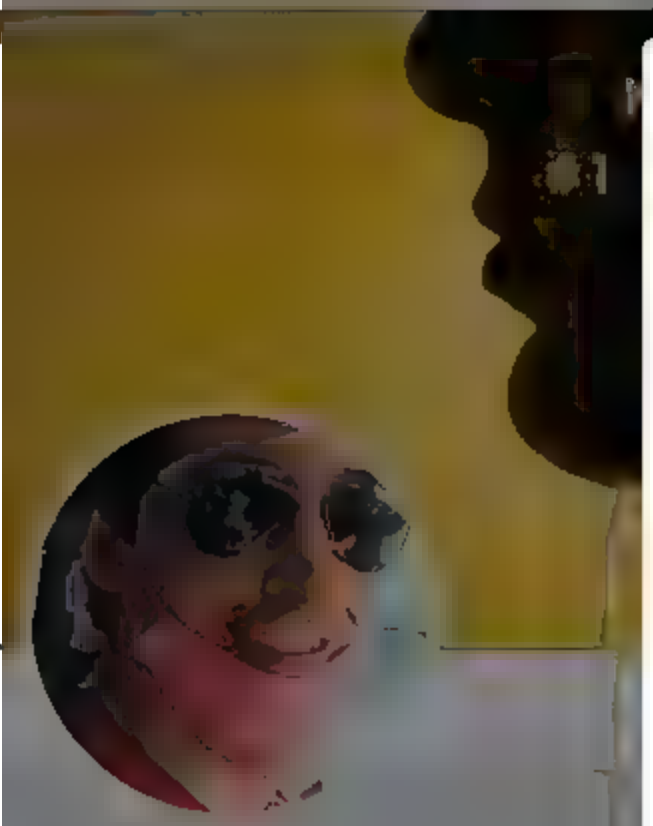
These states have all had pretty huge population growth in the periods you mention. Got any data on deaths per passenger mile travelled?



1 3

**Captain Yesterday** @cptyesterday · 12 Jun 2019
I took a quick and dirty look at some numbers. Fatalities/mile did rise more in the states Alex mentions than nationwide. Some context though: a WA resident's chances of a traffic fatality rise more when she crosses the bridge into Oregon than they did when WA legalized.

Just to be clear: today's peer-reviewed study on medical cannabis laws says not just that they don't reduce opioid overdose deaths but that they increase them (though the researchers say they believe both findings are spurious).

**and opioid overdose mortality has reversed over time**

Chelsea L. Shover, Corey S. Davis, Sanford C. Gordon, and Keith Humphreys

PNAS first published June 10, 2019
https://doi.org/10.1073/pnas.1903434116

Edited by Kenneth W. Wachter, University of California, Berkeley, CA, and approved May 16, 2019 (received for review February 27, 2019)

Article Figures & SI
Info & Metrics PDF

Medical cannabis has been touted as a solution to the US opioid overdose crisis since Bachhuber et al

verdose mortality. That research received substantial attention
ular press and served as a talking point for the cannabis industry
om the authors and others to exercise caution when using ecolo
idual-level conclusions. In this study, we used the same method
analysis through 2017. Not only did findings from the original s
riod, but the association between state medical cannabis laws a
direction from −21% to +23% and remained positive after acco
abis laws. We also uncovered no evidence that either broader (re
rahydrocannabinol) cannabis laws were associated with change
. We find it unlikely that medical cannabis—used by about 2.5%
erted large conflicting effects on opioid overdose mortality. A r
al this association is spurious. Moreover, if such relationships de
rned with aggregate data. Research into therapeutic potential o
claim that enacting medical cannabis laws will reduce opioid ove
icism.

Close. The study replicated the findings of previous research finding MMJ was associated with reduced opioid ODs during the period studied, but associated with increased ODs later, and therefore both associations are likely spurious.

And speaking of that peer-reviewed research! Congratulations to Chelsea Stover and @KeithNHumphreys

And please note the study's third author.

Dr. Stea: a fine idea and a couple of pieces of research in the book are moving toward publication. I am also trying to get some funding for a big study on a specific aspect of the violence issue. Unfortunately I am not an expert on figuring out where to get research grants...

4

**Alex Berenson** @AlexBerenson · 10 Jun 2019

And I don't have a bunch of grad students whom I can point at various aspects of the question. One of the great disappointments for me in the way the academic left responded to the book was that I felt it actually opened many avenues for research.

"Most" is a meaningless word, an artful dodge. It means more than half, so your statement is true. It is also true that psychosis is a multiplicative factor for violence; the best meta-analysis shows people with schizophrenia are 20x as likely to commit homicide as those without.

1

**Alex Berenson** @AlexBerenson · 10 Jun 2019

As for the other half of that statement: It would be astonishing if "most people who commit violence" were psychotic, given that only about 3-4% of the population is ever diagnosed with psychotic illness and those people aren't psychotic all the time.

1

**Alex Berenson**

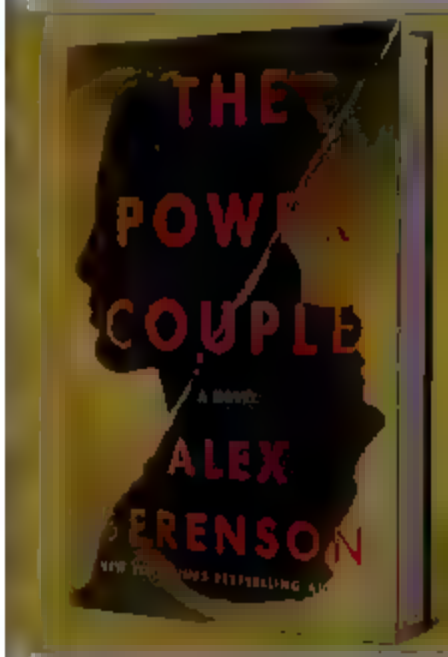
Replying to [redacted]



So both your statements are technically true, and meaningless. The number that matters is the risk ratio, the propensity of an individual to commit crime; the risk ratio for people with psychosis is very high, and much of that risk is mediated by drug use, especially cannabis.

I've tried and abused a lot of "hard" drugs, and few of them brought me closer to irreversible psychosis than modern cannabis. I truly appreciate your understanding and writing, it's the first time I've seen the full scope of my experience represented and backed by fact. I reached four months abstinence a few days ago and am going to continue to do my best to abstain. Thank you for the well wishes, and I'm definitely open to answering any questions you have in the future.

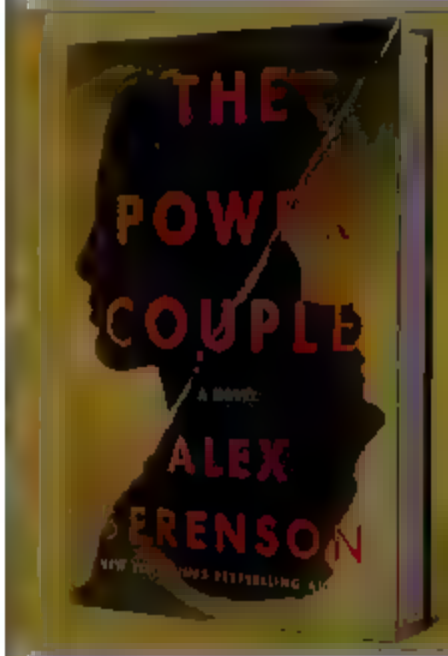
Alex refuses2admit that we have far more solid evidence4benefits from marijuana use than harms. Cannabis' THC enhances antitumor&antidiabetes&antiAlzheimers effects of our internal cannabinoids. Health-positive effects r confirmed by lab&population data.



**Matt Elrod** @melrod42 · 10 Jun 2019

Replying to

Here in Canada, the courts, having reviewed the evidence and expert testimony of both sides of the debate, concluded cannabis can be medicinal and ordered the government to facilitate medicinal use. Later, the government finally conceded prohibition is counter-productive.

2

**Julie K. Johnson** @JulieKJohnson · 9 Jun 2019
Replying to [redacted]
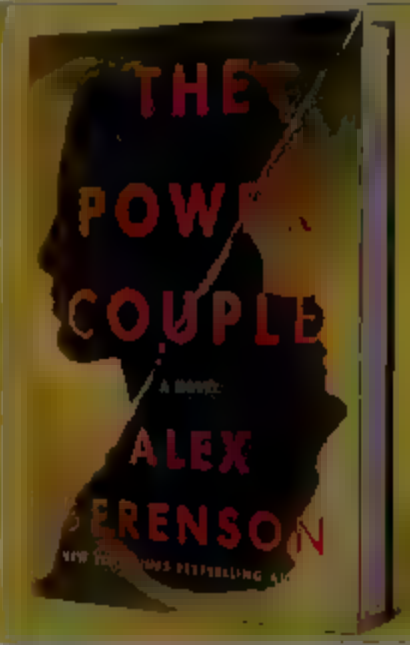
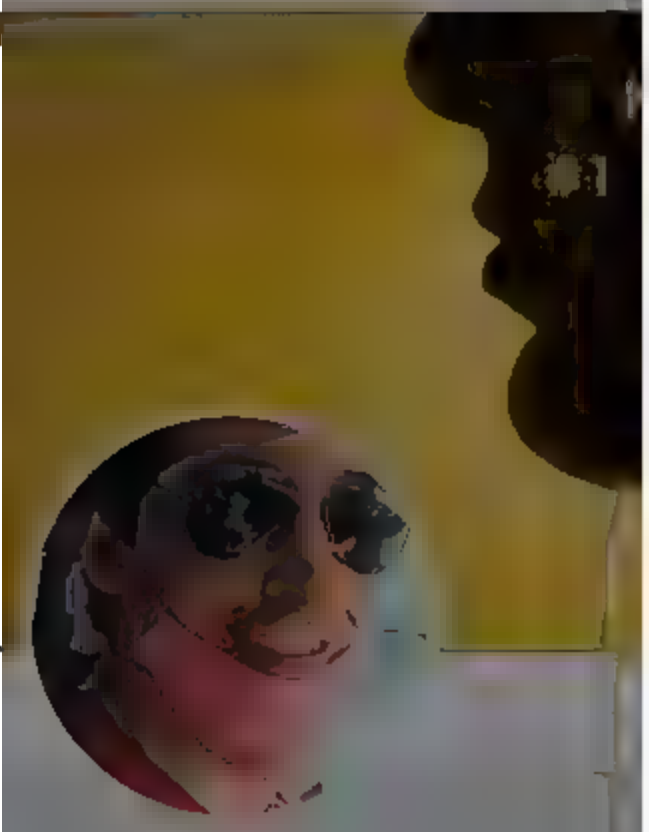
Cheap analysis doesn't help anyone, ever. It is my (subjective) personal & professional perspective that exposing a vulnerable person is harmful to that person & the cause. From an objective research perspective, one personal case is an outlier, not the norm. Wait for research.



1 3

**Will Jones III, MPA** @WillVJones · 9 Jun 2019
I'd be curious to read more on this. Any studies you have to reccomend reading on the matter that guide your opinion on this? It's my understanding that for those who choose, sharing their story can be empowering & also help others in the situation not feel alone & give strength.



1

One final follow-up from the guy who contacted me Friday - I asked if living in a legalized state made it harder to stay clean. His answer... and btw he's not the only user to tell me that quitting cocaine or heroin is easier than cannabis. Fingers crossed he stays sober.

> four cannabis advertisements on the way to and from treatment every day. There's also a lot of misunderstanding in the rooms...I constantly feel the need to justify why my use of cannabis was so dangerous, especially to old timers whose exposure to the 1970's era of cannabis is their basis of understanding - when the average strain was only 2-3% THC and ~1% CBD. Explaining dabs to older folks is difficult, and I'm often treated as someone who hasn't experienced the "hard" edge of addiction. On the contrary, I've tried and abused a lot of "hard" drugs, and few of them brought me closer to irreversible psychosis than modern cannabis. I truly appreciate your understanding and writing, it's the first time I've seen the full scope of my experience represented and backed by fact. I reached four months abstinence a few days ago and am going to continue to do my best to abstain. Thank you for the well wishes, and I'm definitely open to answering any questions you have in the future.

zeal - If nothing else, my depression was not the first thing on my mind. However, my panicked skyrocketed, the rage got worse, and I began to tear apart my relationship. I got a teaching job, and began to use 90% vape pens in the bathroom, going to dispensaries on breaks to buy edibles. I kept getting worse, and finally sought help at [redacted]

ationship. I've lost everything...and never gotten help w. Thank you for finding and telling the truth and for minding me why I have to keep fighting to stay sober itter how bad my depression.

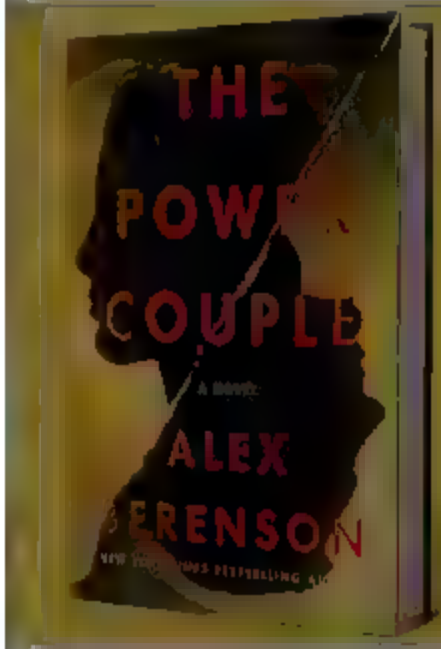
nt from my iPhone

10 11 25

**Alex Berenson**
@AlexBerenson

2/ I asked him about the subjective experience of using at that level, as well as the cost and whether dispensaries ever discouraged him. His response:

**Primary**



I was spending 200-300 per day, a large majority of my teaching salary. It was a new normal - not even really high. I was moreso using just to feel normal. When I wasn't using or nearing running out, I would experience intense physical withdrawal (sweating, inability to eat or defecate, and insomnia) as well as catastrophic thinking, anxiety, and intense irritability. My mindset was consumed with metaphysical and existential concern...I was experiencing an inability to do life on life's terms. Everything needed to be tied to a larger meaning and purpose. I couldn't possibly imagine living longer than a year more - and was becoming suicidal. I would vocalize that I just wanted to die, and would fantasize about being involved in a purposeful event that included me dying (I.e., stepping in front of a bullet for someone else). I believed I was part of a spiritual battle, and would stare at myself in the mirror and make guttural sounds. My teaching was effective but heightened - for instance, if we were reading an article in class about

**Alex Berenson** @AlexBerenson

1/ This astonishing email arrived last night from a user in recovery. As he writes, he had some substance abuse issues before, but easy access to high potency cannabis almost destroyed him. He is lucky not to be permanently psychotic - he was using 3000+ MG of THC by the end.

[redacted] and we moved to [redacted] to teach high school English. Life got better - my access to high potency weed diminished and I found purpose in teaching, but my depression was very real. I smoked a quarter ounce a week of [redacted] weed per week, and still abused opiates. I still got blackout drunk from time to time as well. After teaching [redacted] four years, we decided to move back to Northern California. I was beginning to see signs of psychosis in myself - intense paranoia, delusional spiritual beliefs, and intense, depersonalize rage. After moving to California, weed was legalized - it didn't take me long to discover was - 75% to 90% THC. I bought a dab rig and a butane torch and jumped down the rabbit hole with zeal - if nothing else, my depression was not the first thing on my mind. However, my paranoia skyrocketed, the rage got worse, and I began to tear apart my relationship. I got a teaching job, and began to use 90% vape pens in the bathroom, going to dispensaries on breaks to buy edibles. I kept getting worse, and finally sought help at [redacted]

[redacted] When I entered, I was smoking a quarter ou
flower, 2-3 grams of dabs, 1-2 grams of cartridges, a
00 mgs of THC through edibles per day. The psychi
d me after 8 days sober that my THC levels still hadi
pped into the maximum readable range, something
er seen before. At this point I had intensely delusio
ritual beliefs, uncontrollable rage, and had become
lent towards objects - often hitting, breaking, and
owing things when angry. I was sent to a 60 day
atient rehab after relapsing and ending my 6 year
ationship. I've lost everything...and never gotten hel
w. Thank you for finding and telling the truth and for
minding me why I have to keep fighting to stay sobe
itter how bad my depression.

Hey @vprnet @vtdigger and other VT media - here is one simple question to ask @SarahFairVT: Had you made an NGRI deal instead of dismissing the charges, could you have mandated public notification of release as part of the deal? If she won't answer it, find a expert who will.

**Alex Berenson**
@AlexBerenson

It seems @SarahFairVT either doesn't know the law or is, erm, misleading the public. It is true that NGRI pleas vs. dismissals make no difference to treatment decisions. But they certainly make a difference to the public's ability to monitor cases and defendants afterwards.

2/ Had the defendants pled to NGRI verdicts, she would have had far more leverage - including mandating public notification of their release from forensic or civil confinement as part of a deal. It is her decision to dismiss the charges that puts HIPAA into play.

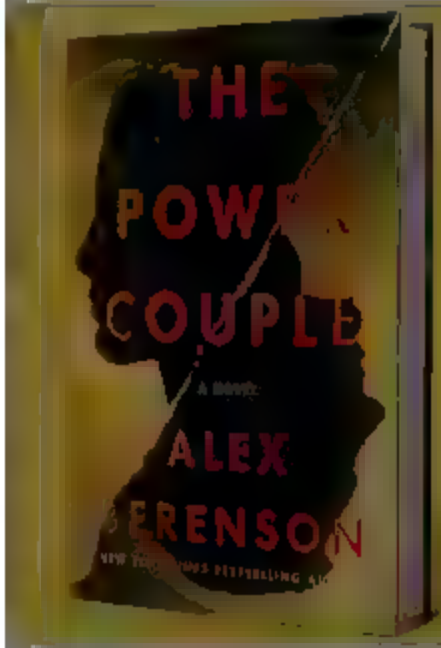
2 1

**Alex Berenson** @AlexBerenson · 7 Jun 2019

3/ So why didn't she get NGRI deals instead of dismissing the charges outright? Only she knows. But the Bourgoin case shows she doesn't like the public to see tox reports when THC is involved. And deals would have resulted in the release of more information. Over to you, Sarah.

3 1 6

**Alex Berenson**
@AlexBerenson



4/ As the Jussie Smollett case shows, abuse of prosecutorial discretion goes both ways... and when a prosecutor drops a case, there's going to be even less oversight - it's not as if the defendant will complain. Maybe @SarahFairVT needs a new Twitter handle. Ideas welcome...

Haven't seen you engage with anyone who disagrees with you, yet. Not much debate happening. Also the mass murders on weed thing, that was kinda levels of crazy.

The media could not be played.

# Just another nonviolent smoker nonviolently shooting his buddy in the head. At least no kids were involved...

Maryland / Howard County

## Ellicott City men played with a handgun, smoked marijuana before fatal shooting, charging documents say

Rane Nikolas Dellinger, 20, of Autumn Hill Drive in Ellicott City, [redacted], according to police. He is charged with first- and second-degree murder, first- and second-degree assault, reckless endangerment and the use of a handgun in a crime of violence, according to charging documents. No phone number was listed for his address, and no attorney was listed in court records.

Police wrote that the three men went to the church parking lot to smoke marijuana and then "the group began playing around," with the handgun. Dellinger sat in the passenger seat and "was holding the firearm which was pointed at Jacob Mauer" in the driver's seat, police wrote. "At that time, the gun discharged, striking Jacob on the right side of the head."

More and more questions from readers about cannabis and mass homicides. I can only repeat that though many cases show a link - through tox screens, police interviews, or media reports - the sample size is small and there is no comprehensive study on drug use among mass killers.

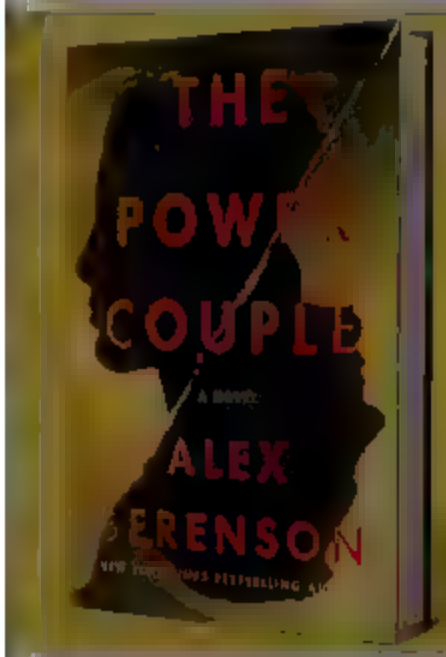
2/ Including, most recently, this stunning paper in Frontiers in Psychiatry, which draws on MacArthur research data to show that cannabis use - not cocaine or alcohol, only cannabis - predicted violence (at a 3X ratio) in the mentally ill. You simply don't know the science.



**Criminality in Patients Discharged From Mental Health Services: A Longitudinal Study Using Growth Mixture Modeling**

OPEN ACCESS

**Background:** Individuals with severe mental illnesses are at greater risk of offensive and violence. Though the relationship remains unclear due to the interplay of static and dynamic risk factors. Static factors have generally been emphasized, leaving little room for [illegible] risk. Using the longitudinal study, we identify subgroups of psychiatric populations at risk of violence and criminality by taking into account the dynamic changes of symptomatology and substance use.

**Method:** A total of 826 patients from the MacArthur Violence Risk Assessment Study having completed five post-discharge follow-ups were analyzed. Individuals were classified into violence trajectories using and criminality trajectories were computed for each substance (cannabis, alcohol, and cocaine - abuse or combined) and for symptomatology and reported as dynamic factors, along with clinic, demographic and psychiatric static factors, into heavy logistic regressions for predicting violence and criminality. Best predictors were then divided using backward elimination, and receiver operator characteristic (ROC) curves were calculated for both models.

**Results:** Five trajectories were found for violence: low, versus high violence. Best predictors for belonging in the high violence group were low verbal intelligence, [illegible] higher psychopathy (total and Factor 1 and 2 scores), persistent cannabis use (alone and combined), moderate affective symptoms. The model's area under the curve (AUC) was [illegible]. Two trajectories were also chosen as being optimal for criminality. The best predictors [illegible] were [illegible], [illegible], [illegible], [illegible], lower educational level, higher score of psychopathy (Factor 1), persistent polysubstance use (cannabis, cocaine, and alcohol), and persistent cannabis use alone). Both models were moderately predictive of outcomes.

# Oh I hadn't realized @maiasz took money from @OpenSociety. He who pays the writer calls the book, or something like that, amirite, Maia? We can discuss in Boston, if you're not afraid to show.

Replying to @AlexBerenson @maiasz and 3 others

Maia Szalavitz is Soros Justice Fellow. She knows Soros wants pot legalized. If you take money from him, are you allowed to tell the truth about marijuana? She really needs to go back to the studies and take issue with some of the scholars you

5/29/19, 5:25 PM

**Media Fellowships**

The Soros Justice Media Fellowships support writers, print and broadcast journalists, artists, filmmakers, and other individuals with distinctive voices proposing to complete media projects that engage and inform, spur debate and conversation, and catalyze change on important U.S. criminal justice issues. The Media Fellowships aim to mitigate the time, space, and market constraints that often discourage individuals from pursuing vital but marginalized, controversial, or unpopular topics in comprehensive and creative ways. Media Fellowships are 12 months in duration, and fellows are expected to make their projects their full-time work during the term of the fellowship.

Obviously, a subject doesn't have to check all those boxes - few do - but looking at it can give you some clue as to whether the time you plan to invest makes sense. (And if you find a topic that seems to check all four, ask yourself: Am I thinking outside the box? Or just nuts?)

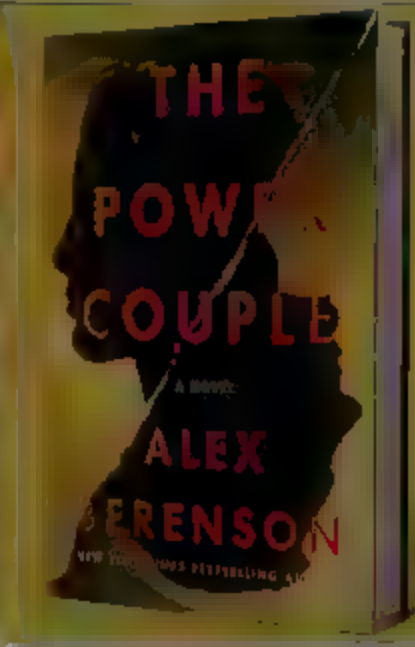
> All true. The psychosis risk of opioids is much lower but the overdose and addiction risks are far higher. And if we as citizens want to legalize cannabis as a recreational intoxicant - knowing that it can be dangerous to many users - so be it. Alcohol and tobacco are both legal.



1

> **Alex Berenson** @AlexBerenson · 15s
> But that is not how the cannabis lobby has presented legalization. It has sharply oversold the (almost nonexistent) medical benefits of the drug, and downplayed or simply ignored its dangers. To be blunt, it has lied. I object to the lies, not the drug.

I'm glad you won. Not sure why you aren't acknowledging these facts. And I don't see cannabis-induced psychosis as a defense any more than "I just wanted to have fun" would be in a case where a driver got blackout drunk and had a fatal accident.

2 1

**Alex Berenson**
@AlexBerenson

Replying to

Voluntary intoxication is not a defense, nor should it be. But in that case we would understand that alcohol encouraged the driver's criminal behavior; cannabis played the same role here, and I'm going to say so whatever your political motivations for wanting me not to do so.

The problem with that is, how much punishment is enough? Nothing can undo the pain and horror that he caused, not even a life sentence. Also, we as a society totally understate just how punishing each year (or even day) in prison is. Why do we think 20 years is not enough?

2 3

**Alex Berenson**
@AlexBerenson

Replying to [redacted]

I think this is a more honest way to argue for shorter sentences. I happen to disagree - I think he (if guilty) has forfeited any chance at rehabilitation for the majority of his natural life. Why should he be free at 44? But I'll admit this view comes from a desire to punish.

People age out of crime. It's biological, physical, biochemical, hormonal, social, cultural.

Are there some ppl who never change? Maybe. But most/many do--and bet many who seemingly don't don't bc of all the other social pressures we put in their way (like violent prisons).

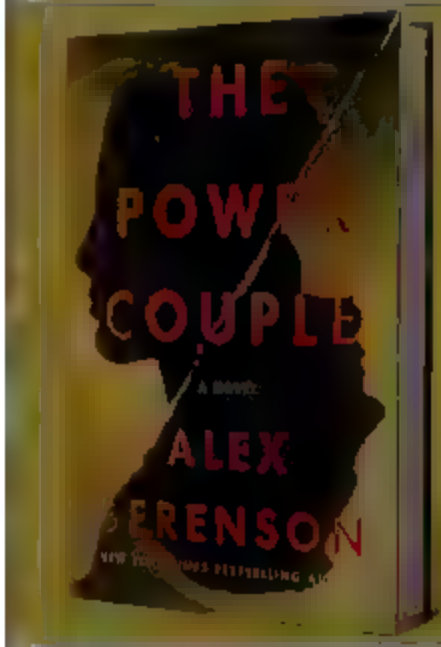
2/ To which the neighbor responded, "it wasn't laced. (I) got it from the shop." Cannabis causes psychosis. Psychosis causes violence. All the time. The only difference is that this case is high-enough profile that the witnesses started talking to lawyers.

On Sunday, March 31st at approximately 2:00 pm, [redacted] was in his apartment with his friend, [redacted], who is the guitarist in his band, [redacted] watching at [redacted]

At this time someone started knocking at his door. The knocking was very hard and loud. [redacted] opened the door and he saw Eric Holder. Eric was yelling that he wanted to talk to [redacted] Eric Holder lived in the same complex as [redacted] and on the same floor but opposite from [redacted] Eric lived in Apartment Number 9. Eric knew that [redacted] was in a band and sometimes asked [redacted] to listen to the rap music he was making. Sometimes they smoked marijuana together.



When [redacted] opened the door, Eric continued yelling. Eric said to [redacted] "You laced the pot you sold me." [redacted] told me that three (3) weeks prior to this, [redacted] had sold Eric Ten-Dollars ($10.00) worth of marijuana.

Are things that bad in SF/Sea, Keith? As you may imagine I'm perfectly willing to believe the worst, but NY had 2,000 murders the year Rudy was elected. There was a true crisis not just of living standards/homelessness but public order.

1/ Looks like Eric Holder, who (allegedly) killed Nipsey Hussle in LA, was having a textbook cannabis-induced psychotic break - an hour before he attacked his neighbor after accusing him of selling $10 of marijuana that was "laced."

Everybody's a critic, I know. But since I have some experience with fictional entertainment, here's a better way ... could have played S6: at Winterfell, the Night King kills Jon's dragon (and possibly Jon); then when he raises it, it kills Danerys's dragon (not her)...

1 2

**Alex Berenson** @AlexBerenson · 19 May 2019

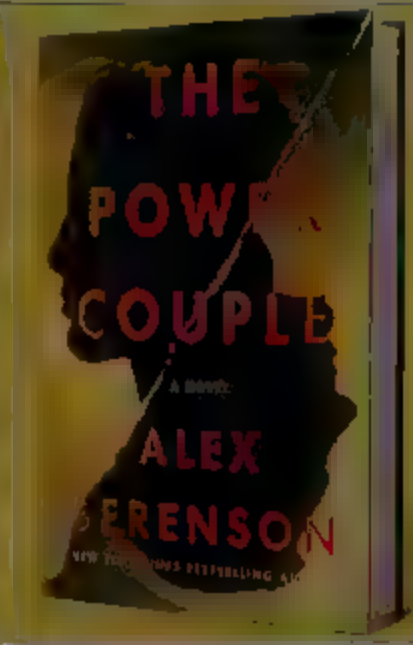
Then Arya kills him and all the dragons are gone. First off, this would have been a real surprise, unlike anything so far this year. Second, the question then becomes: what happens to a Dragon Queen who has no dragons? Can she hold onto her power?

1 1

**Alex Berenson** @AlexBerenson · 19 May 2019

How does she overcome Cersei? Who is the real usurper, Cersei and her Golden Company or Danerys and her Unsellied? At the least it would have set up a much more interested battle for King's Landing, rather than a slaughter that seemed mostly out of character for Danerys.

1 2



**Alex Berenson**
@AlexBerenson

Oh well. At every turn the show has followed the obvious path this season. Too late now.

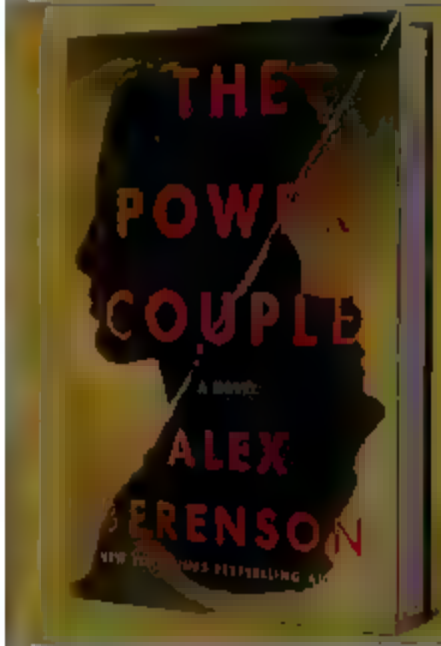
3/ The letter attacks efforts "to portray the science as less conclusive and less settled as it actually is" (hello [redacted]) and refers to the violence risks of cannabis psychosis - a first from a mental health agency. This is a real breakthrough.



2 3 17

**Kevin Krooss** @KevinKrooss · 19 May 2019

Replying to [redacted]

If licensed businesses are selling a product that damages mental health won't they be sued out of existence?

Isn't it ironic that legalization seems to be causing the downfall of recreational marijuana.

@AlexBerenson

Glad @keithstone45 called out @stevedeangelo for his hypocrisy. In reality I have no financial stake in prohibition. Legalization might even be good for the book - it will increase use, which will increase psychosis and violence, which will ultimately drive interest.

Heard your interview today with Dennis...very interesting. Have some people in my life with mental health issues that you discussed. I wanted to know, is there any information to indicate a harmful impact to babies in womb when one or both parents have been regular pot smokers?

1

**Alex Berenson**
@AlexBerenson

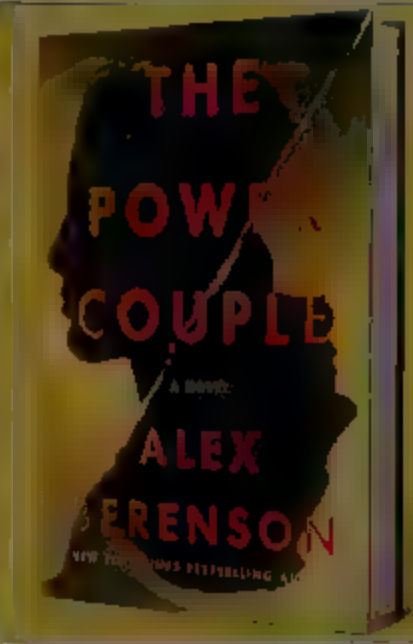
Replying to [redacted]



Yes. I didn't discuss this issue in the book but I have been looking into it recently and there is increasing evidence that prenatal use can harm fetuses.

Thank you Alex. The interview was very insightful and I hope to read your book. It brings some clarity to what I've seen.

Fun fact: the weight-loss product plugs on his show, OAE, is an analogue of the endocannabinoid anandamide,. "... more thorough, controlled investigations are needed."

Writers, Editors, Producers,

I hope you are well. Can I offer you a press pass to CannaGather's upcoming "The Power of the Brand" event, 5/28, 7pm in NYC? (details follow)

Last month's CannaGather Awards in NYC was a huge success lead by Canopy Growth CEO Bruce Linton among many other industry influentials. CannaGather is the largest cannabis industry community of more than 10,000 members supporting the state by state cannabis ecosystems by making it more accessible to new entrants and entrepreneurs. CannaGather is dedicated to educating and connecting all those who are in and interested in

NY Times: Can CBD Really Do All That?
How one molecule from the cannabis plant came to be seen as a therapeutic cure-all.

2

**Alex Berenson**
@AlexBerenson

Replying to

Spoiler alert: no. But at least it doesn't cause psychosis. Btw - anyone who slogs through to the end of the article may figure out that CBD has now stopped working in both of the index epilepsy cases.

Because CBD alone isn't enough. While plant cannabis, with its entourage effect, has kept Alexis Bortell seizure free for five years.

Replying to

Yes, here's yet another example of CBD hype from my old employer (it has errors about THC too and generally downplays the psychosis risks). But I just can't fight about everything... nytimes.com/interactive/20…

You advocates need to figure out whether to ignore Tell Your Children or not. And if not, whether to call me racist or a crackpot or what. Because I gotta be honest: nothing's really sticking, and you have a bit of a problem these days...

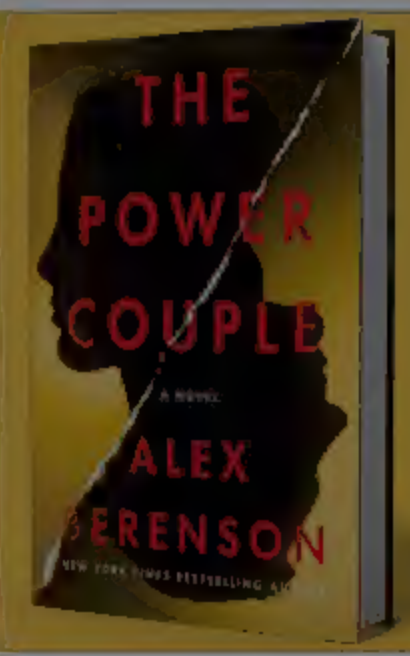
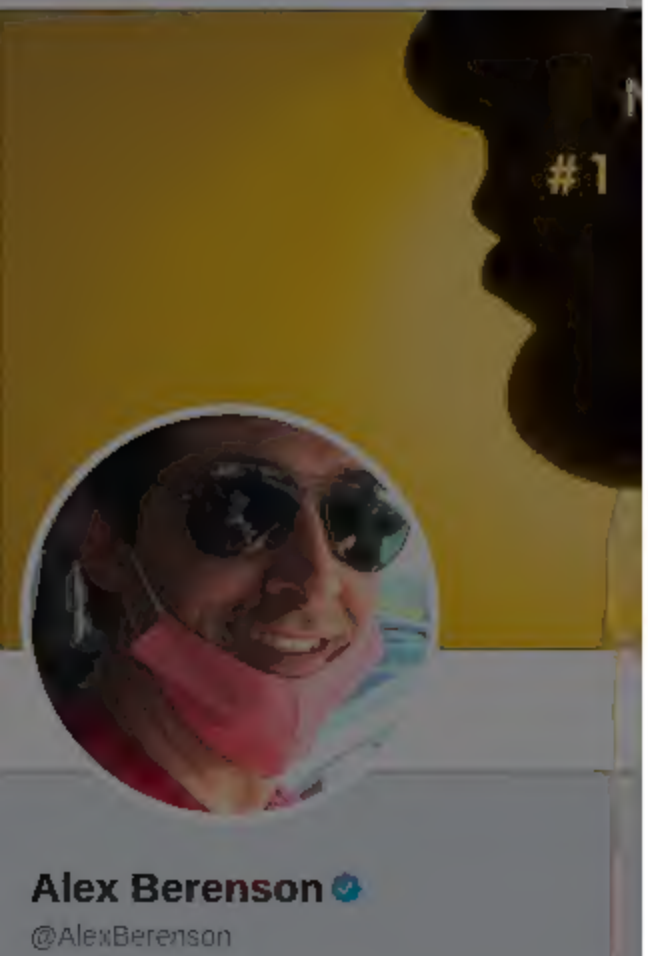
I disagree with the premise of your book, but I see no harm in having more information out there from someone that's rigorously studied the subject.



**Clint Werner** @MJgatewayhealth · 15 May 2019



Replying to @AlexBerenson

Its beginning2look like Alex is suffering from that weird form of ego-paranoia delusional reefer madness that afflicts those who dont use marijuana. So terribly desperate to be relevant eh? As more&more data accrues on how cannabis use blocks prodisease processes, support grows

Since googling "Garza" and "high as fuck" is apparently too much trouble for you... have at it. I don't misquote or take articles out of context. I wouldn't, and I don't have to - there are far more cases than I can tweet as it is.

If she lied to the police about being given an intense second drug and testing proved that, why would we trust her testimony about her supposed psychotic episode from a bong hit?

1 1

**Alex Berenson**
@AlexBerenson

Follow

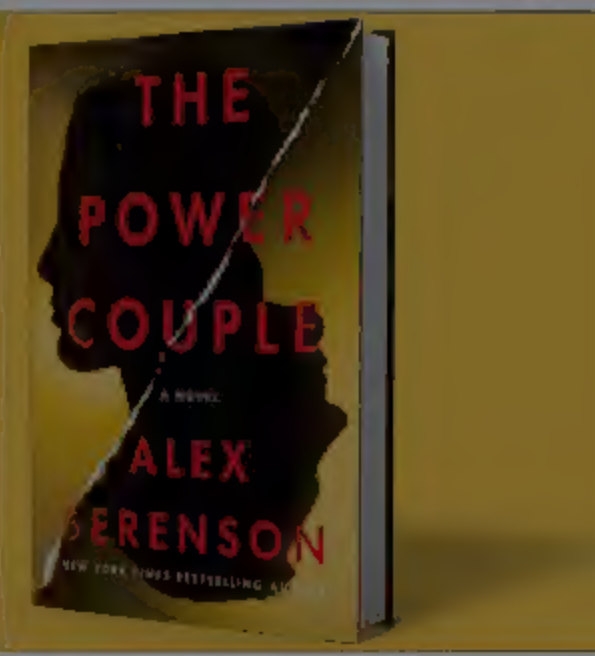
Replying to @kneupperwriter

Oh just stop. She stabbed him, her dog, and then tried to slit her own throat. No history of violence. She didn't try to escape. And cannabis psychosis is voluntary intoxication - not a criminal defense. She has no reason to lie. She'd be better off saying almost anything else.

10:48 AM - 15 May 2019

1

**Kevin Kneupper** @kneupperwriter · 15 May 2019
Replying to @AlexBerenson
You sound way invested in this theory but I'm sorry, it just doesn't sound reasonable. Girl kills guy in extremely violent way. Tells the police "oh he gave me some kind of intense drug but I don't know what." They test her, there's no drug. "Oh it must have been the bong hit."



2

**Kevin Kneupper** @kneupperwriter · 15 May 2019
This sounds way more like somebody with a bad excuse whose attorneys are trying to make it work despite the evidence than an irrefutable case of psychosis from a bong hit with no other possible explanations.
